My Friend Pedro: Ripe for Revenge

My Friend Pedro is a side-scroller action game developed by DevolverDigital. Its basic premise is to shoot enemies, jump over obstacles and clear the levels. That's it. But what makes this game unique as compared to others is the game mechanics and storyline.

There are on-screen buttons to move and shoot; just two movement mechanics – jump and roll. Akin to *Angry Birds*, you drag in one direction to bring up a jump trajectory. To roll, aim the same trajectory towards the ground and wait for the indicator icon to change. (Alternatively, use the *Tinder* mechanic to swipe). These mechanics help the game stand out in a crowd; though their efficient use in the game comes with a steep learning curve. Combat isn't

bland either. There are several guns available throughout the game, but you start with your dual revolvers. When entering an enemy's line of sight, you go into *Max Payne*'s 'bullet time'. This seems easy at first but becomes more difficult as game progress pushes enemy density.

The game's storyline is interesting. You play as a hitman, and your friend is a banana (no, not bananas, a literal banana) called Pedro, who is worried because his family got kidnapped by his gangsters. To help out your friend, you venture out into the gangster's den hoping that you will be able to save your friend's family in time. And that's all we'll say, to avoid spoilers.

All in all, *My Friend Pedro: Ripe for Revenge* is a must-play to challenge your reflex and aiming skills and have some light humour while you're at it.

Comix Breaker

The main aim of this MojitoGames-developed roguelike deck builder is to defeat monsters and bosses using cards.

This game gets 10/10 for graphics. Characters, enemies and bosses are perfectly animated and gel well. The cutscenes and the other small stuff like hit animations – even just browsing the menu – are just perfect. There's a high attention to detail and quality levels of graphics. One UX factor still bugs us though. Screen real estate on the main menu is overloaded with all the events, daily quests and other unnecessary stuff. So much so, that the 'play' button of the game is a small space in the bottom right corner. New players could be easily overwhelmed.

In *Comix Breaker*, you will enter different comic-book worlds to fight enemies and bosses, to eventually conquer said worlds. Defeating enemies requires cards. Cards at your disposal have various stats related to Attack, Defense and Final Attack. You have a limited number of moves to inflict maximum damage whilst protecting yourself from incoming damage. When not in a match, you'll be trying your luck on the game's *gacha* system to get your hands on more powerful cards and items. So you will, most definitely at some point, end up paying for a premium loot box.

All in all, *Comix Breaker* is a great for those who like deck-building games and can take one game and stick to it. If you're sure that you can side-step a potentially crippling gambling addiction, give this game a shot and you will not be disappointed.

Rollflow

Rollflow is a 3D platformer Arcade game developed by NonStatic studios. The main aim is to get the ball to the finish line without hitting obstacles or falling down.

The main mechanic in the game is rather Newtonian. Your ball spawns at a starting point in mid-air; and as one would expect, it falls. You now have to place different platforms to direct the ball to the finish line. There are four platform types: straight-right, straight-left, curving upward and

curving downward. There's also the mechanic of "Active Pause" where you can literally pause the game, look around the level and build three tiles ahead of time while the ball just floats in mid-air. It is good for someone who's trying the game for the first time but we really recommend playing the game without Active Pause because, after a point, it just feels like cheating.

Graphics look really good but since the game is still in its infancy, it is not optimised and only flagship devices can run it without any issues.

All in all, *Rollflow* is a decent game with good graphics and good level design.
