

SECURITY WATCH

Passports now the most attacked form of ID

The 'Identify Fraud Report 2022' by Onfido recently revealed that passwords are now the most frequently attacked form of ID. Onfido researchers said that this indicates a shift in fraudster's methods and they now target a one-sided passport page rather than a two-sided ID card. "(The fraudsters) target the most high-assurance document in the hope that a passport's reputation will help the fake go undetected", said the researchers. Onfido specialists process millions of IDs every year and help their clients detect fraud over 2,500 documents types issued by 195 countries. The report is based on data collected from October 1, 2020 to October 1, 2021. Another key finding shared by the report is that fraudsters usually prefer to create a fake document from scratch rather than tampering with a genuine ID. Additionally, losses from identity theft are also growing, ballooning by 42 percent in 2020 to reach \$712bn.

MOBILE WATCH

Oppo Find N

Oppo has officially confirmed the arrival of its first mainstream foldable phone, the Find N. The teaser image confirms an inward folding design similar to the Galaxy Z Fold 3. Find N was introduced by Peter Lau, chief product officer at Oppo and co-founder of OnePlus. He revealed that the phone has been in the making

for 4 years and Oppo has focused on making the phone beautiful, pleasant, and easy to use. The phone will reportedly be powered by a Snapdragon 888 octa-core chipset paired with 12GB RAM and have Android 11. The phone is likely to include an 8-inch LTPO display with 2K resolution and 120Hz variable refresh rate. The foldable will include a 12.6 MP primary sensor, paired with an f/1.8 aperture lens and equipped with OIS. The front camera resolution is allegedly 8.1 MP and it's paired with an f/2.4 lens and EIS.

APP WATCH

Wacom Notes

While the Google Play Store is packed with various kinds of Notes apps, there's a certain charm to those that convert handwritten notes into digital documents. Especially apps that implement it well. To that end, Wacom Notes does exactly that and is now available on the Play Store. The app comes with a feature dubbed Semantic Ink that

analyses your notes as you write them and provides contextual information to go along with them. So, if you're writing about something you're not too familiar with the topic you're writing about, this feature could prove to be a Godsend. The Wacom Notes app comes with a "precision

pen experience" and works best with styluses, however, you can use it with your fingers too without too much of an issue. The notes you write is transformed into digital, editable text. Additionally, Wacom Notes recognises and understands what you've written, so you can easily search within your array of notes and find what you want in a jiffy. You can also name your notes, organise them according to the topic and combine several notes, and export them into various formats. Do note that you will need a subscription to Inkspace Plus but it is completely free. The app also has no in-app purchases, so we encourage you to try it out.

Novi

Novi is a digital wallet app from Facebook that allows users to send and receive money internationally. The app converts sent money into USDP and the receiver converts it out of USDP into their national currency.

Scrolling Icons Live Wallpaper

A unique live wallpaper app that uses icon packs for your wallpaper, Scrolling Icons Live Wallpaper can add a very unique look to your home screen. You can use the icons on your device by default or download an icon pack and use those.

Sky Tonight - Star Gazer Guide

Sky Tonight is an astronomical app for exploring the sky. It allows stargazers to see the real-time positions of space objects, see the position of celestial objects at different time periods via Time Machine mode, and more.
