

Premium Gaming Laptop

Ultimate combination

The premium laptop gaming category is not too different from a high-end buffet. The laptops in this category are some of the best machines you can purchase under ₹2 lakh, a category we have seen become more accessible to the Indian gamer with each passing year. In this category, we saw some of the most innovative products launched this year so far and after a round of rigorous testing, we finally know who dominates this particular food chain.

Winner: ASUS Scar Strix 15 AMD Advantage Edition

The ASUS Scar Strix 15 AMD Advantage Edition scored the highest numbers in the 3d Mark's Firestrike test and the same graphical performance translated seamlessly into gaming performance as the laptop dominated its competitors. The combination of an AMD Ryzen 9 5000 series CPU and a Radeon 6800M GPU brought forward the best possible performance from this laptop.

In Shadow of the Tomb Raider, the laptop delivered a maximum of 134 FPS on high settings at 1080p resolution, which is really amazing. While running Metro Exodus, the

Alienware M15 R6
Price: ₹1,90,990

Lenovo Legion 5 Pro
Price: ₹1,69,990

ASUS Scar Strix 15 AMD Advantage Edition

Price: ₹1,97,885

laptop felt just shy of 100 FPS and ended up running the game at 98 FPS at 1080p display resolution and high graphical preset. The laptop also chewed through games like Dirt 5 and Gears 5, running each of them at 113 FPS and 133 FPS respectively.

The AMD Advantage tech allowed the Scar Strix 15 to outperform its competitors in most of the games we tested and in our thermal performance tests as well, thus taking the top spot of the winner in this category.

Runner Up: Alienware M15 R6

The Alienware M15 R6 we tested comes with an 11th Gen Intel Core i7-11800H CPU and a powerful Nvidia RTX 3070 GPU. The laptop performed just as good at the ASUS Scar Strix 15 in games such as Shadow of the Tomb Raider, essentially delivering 132 FPS. It performed really well in games like Dirt 5, running the game at around 124 FPS. Additionally, the laptop ran Metro Exodus at 96 FPS. Lastly, the laptop ran Gears 5 just as well as the ASUS Scar Strix 15 AMD edition at 131 FPS.

Alienware has equipped its gaming laptop with an excellent cooling solution and a top-notch high refresh rate screen which performed particularly well in terms of colour accuracy. For all these reasons, the Alienware M15 R6 rightly sits on the second spot in this category.

Best Buy: Lenovo Legion 5 Pro

Powering the Lenovo Legion 5 Pro is an AMD Ryzen 7 5800H octa-core processor in combination with an Nvidia RTX 3070 with 140W TGP. In terms of real-world gaming performance, the laptop delivered around 120 FPS in Shadow of the Tomb Raider at high settings and 1080p resolution. The laptop ran Metro Exodus just as well as the Lenovo Legion 5 Pro at 95 FPS. The Lenovo Legion 5 Pro felt a little behind the other two laptops while running the Gears 5 at high graphical preset at 1080p as it only managed to run the game at 106 FPS.

The laptop impressed us with its ultra-bright QHD display which made every piece of media a treat to watch. Lenovo ships the fully loaded Legion 5 Pro complete with all these capabilities in a value for money package making it worthy to take this prestigious spot in the premium gaming laptop category.
