

Thin and Light laptops

Ultimate portability!

Things have changed since 2020 when we got our hands on some of the best thin and light laptops. Thanks to AMD's prowess in manufacturing powerful and efficient chips, the consumer finally has more choice than ever when it comes to buying thin and light laptops. Similarly, we also had a bit of fun while testing these world-class machines that are available in a range of diverse options, offering unparalleled performance and features. However, just like every competition, there can only be one winner.

Winner: Lenovo Slim 7i Carbon

The Lenovo Slim 7i Carbon was the most impressive thin and light laptop we tested this year in terms of overall performance. Based on Intel's Evo platform, the Slim 7i features a powerful processor, great battery life and an excellent display. We were highly impressed by the amazingly light and strong chassis of the Lenovo Slim 7i, allowing it to have an impressive kerb weight of under 1 kg. Despite its size, the laptop packs a powerful 11th Gen Intel Core i7-1165G7 quad-core processor capable of delivering snappy performance in every office or productivity task you can

Fujitsu UH-X 2-in-1 Laptop
Price: ₹92,990

HP Aero 13
Price: ₹75,490

manage to throw at it. The battery also kept its pace with the powerful processor by delivering more than 7 hours of uninterrupted on-screen time. Speaking of "screens" the Lenovo Slim 7i Carbon packs in a highly colour accurate display which you can easily use for professional workloads.

On top of all these features, the Lenovo Slim 7i Carbon comes with one of the best keyboard and trackpad combinations thus sealing its position as the winner in this category.

Runner Up: Fujitsu UH-X 2-in-1 Laptop

Japanese engineering is world-famous and we found out why while testing the FUJITSU UH-X 2-in-1 laptop. The Japanese company entered the Indian market earlier this year with its UH-X laptop, an ultra-light and powerful 2-in-1 laptop built using an extremely strong material. Despite not being on Intel's Evo platform, the FUJITSU laptop managed to deliver close to 7 hours of uninterrupted battery life.

The laptop's CPU performance is also pretty impressive. The Intel chip scored 1897 in Cinebench R20 score. In the Cinebench R23 score, the chip managed to score 4218 and 1420 as multicore score and single-core score.

Lastly, the "Made-in-Japan" laptop sports a wide variety of ports ensuring that one never feels the need to attach a dongle during their workflow. All this and more helped the FUJITSU UH-X 2-in-1 score the runner-up position.

Best Buy: HP Aero 13

Powered by an AMD Ryzen 5 5600U, the HP Aero 13 gave tough competition to its rivals in several synthetic benchmarks. While testing the laptop through synthetic benchmarks, the laptop scored 3188 in Cinebench R20.

Furthermore, thanks to onboard Radeon graphics, the laptop also scored 2932 in Firestrike 1185 in TimeSpy. Making the HP Aero 13 an ultra-portable gaming machine suited for playing esports titles on the go.

It also won us over thanks to its ultra-light-weight and small form factor both of which add to its portability. During our Calman display testing, the HP Aero 13 performed well, scoring 391 nits of peak brightness and 100% sRGB coverage. The fact that HP has priced the Aero 13 at ₹74,990 makes it worthy of the best buy award in this category.
