

Bluetooth Speaker

Audio on the go

Bluetooth technology has developed tremendously over the past few years making new-age Bluetooth speakers powerhouses that can often eliminate the need for desktop speakers, or in some cases, even home theatre systems. Equipped with advanced technologies such as 360-degree sound, adaptive room EQ correction, and others, it's no surprise that these sound boxes have become one of the most ubiquitous gadgets present in almost every household! The Digit Zero1 Award goes to the product that blew the competition out of the water when it comes to performance, and performance alone and that happens to be the...

Winner: Sonos Move

Equipped with two Class-D digital amplifiers, one downward-firing tweeter, and one mid-woofer, the Sonos Move truly impressed us with its clean, close-to-neutral sound delivery. It is an excellent speaker for almost all genres of music due to its frequency response accuracy. It has a balanced sound profile with excellent mid-range delivery that reproduces

Sony SRS-XB13
Price: ₹4,990

vocals and lead instruments with impeccable clarity. Additionally, the speaker also comes with Automatic Trueplay, a software that assesses the environment the speaker is in and accordingly adjusts its sound to best suit the environment. The result is distortion-free, natural sound with a wide soundstage. The Sonos Move also comes with a pretty solid battery life of 11 hours (at about 50 per cent volume). Priced at ₹43,999, this speaker is definitely not easy on the wallet, it is a premium product, but you get more than enough for what you pay for.

Runner Up: Aiwa SB-X350J

The Aiwa SB-X350J is a compact speaker but it is deceptively loud, especially for a speaker this size. It is one of the smaller speakers we tested this year, but it can fill up a mid-sized room with sound with relative ease. The sound that is produced is full-bodied and pretty balanced. The speaker houses 40mm audio drivers and dual passive bass radiators on the front and back of the speaker. The resulting sound is crisp and detailed, and the soundstage is extremely wide for a speaker this size as well. We were astonished by how much of a punch the speaker could pack despite its compact body, and it got quite close to the Sonos Move in terms of loudness and clarity of sound. Where it did lose out was mid-range accuracy which the Sonos Move nailed to a tee. Nevertheless, it doesn't mean that the SB-X350J isn't good at handling mid-range frequencies. Dialogues and vocals are still pretty crisp. Now, where the speaker does falter is battery life with only 5 hours of playtime according to the company. In our tests, the speaker managed to last 6 hours at 50 per cent volume. Nevertheless, if you're looking for a compact speaker that can pack a punch, the Aiwa SB-X350J is definitely worth considering.

Best Buy: Sony SRS-XB13

Priced at ₹4,990, the Sony SRS-XB13 wins our Best Buy recommendation in the Bluetooth speaker segment, and for good reason. Sporting an extremely compact body, the SRS-XB13 is capable of producing sound that isn't just loud for its diminutive size but is also detailed enough compared to its competitors with a similar form factor. The speaker can easily fill up a room with clear sound with some bass bias, although that is expected since the speaker is a part of Sony's XB (eXtra Bass) lineup.
