

Premium Truly Wireless Earphone

Luxurious wire-free audio experience

The truly wireless earphone segment has grown exponentially since the Apple AirPods made them popular back in 2016. At that time, the category was largely plagued with connectivity issues, inferior sound quality when compared to their wired counterparts, and a few other issues. However, premium truly wireless earphones in 2021 are not only astoundingly refined when it comes to build quality but also have enhanced connectivity and refined sound, in many cases. With brands such as Sony, Bose, Sennheiser, Shure, Soundcore, and countless others constantly innovating to bring out the best possible flagship TWS, the competition is truly cutthroat.

Winner: Shure AONIC 215 True Wireless Gen2

Equipped with SBC, AAC and aptX audio codec support, the Shure AONIC 215 Gen2 allows users to listen to high-resolution audio with minimal latency. The earphones produce a balanced, close to neutral sound signature with some overemphasis in the 5kHz range. Other than that, the Shure AONIC 215 Gen2 is pretty much bang on when it comes

Devialet Gemini
Price: ₹32,999

Soundcore Liberty Air 2 Pro
Price: ₹14,999

Shure AONIC 215 True Wireless Gen2
Price: ₹28,625

to sound signature. The bass response is pristine, both punchy and controlled at the same time while the mids are clear and accurately represented. The highs, as mentioned above, have a slight peak at the 5 kHz region and may sound slightly harsh at times, but this happens sparingly, especially if you listen to music at reasonable volume levels. The treble sounds pleasant and crisp as well. Additionally, we were supremely impressed by the imaging of the earphones. The microphone is excellent, much better than anything we've come across from companies such as Sony, Bose, Apple, and others. Overall, these are a pristine pair of truly wireless earphones and if budget is no bar for you, we would suggest grabbing these without a second thought.

Runner Up: Devialet Gemini

While the Active Noise Cancellation performance is decent, what really impressed us is the sound quality produced by these buds. The low bass response is slightly more exaggerated than on the Shure AONIC 215, so there is some occasional bleeding of the bass into the mids. However, the Devialet does produce slightly cleaner highs than the Shure AONIC 215 Gen2. The Devialet Gemini also come equipped with advanced technologies such as Internal Delay Compensation, Pressure Balance Architecture, and Ear Active Matching. EAM (Ear Active Matching measures the position of the earbuds in the wearer's ear and adjust the equalisation accordingly to compensate and produce the best possible sound. All of this comes together to form an excellent TWS earphone that has very little going against it.

Best Buy: Soundcore Liberty Air 2 Pro

The Soundcore Liberty Air Pro 2 features 11mm dynamic drivers and has a somewhat V-shaped sound signature with rich, punchy bass response and emphasized treble. The bass response is impactful, well-rounded and full-bodied without being obtrusive to the mids and highs. In pop or rap tracks, the bass swells and fills the sound with dynamism but doesn't veil the vocals and mid-range instruments, which is pretty impressive. However, Active Noise Cancellation on these earbuds is decent but not very impressive. Nevertheless, for the price, you are getting impressive sound quality and you can often get these earphones at a discounted price of ₹9,999 which is why it gets our best buy recommendation.
