

Budget Truly Wireless Earphone

Wire-free experience without breaking the bank

Entry-level truly wireless earphones are improving at a meteoric rate. Just a couple of years ago, one couldn't imagine a sub ₹2K earphone sporting features such as touch controls, low latency gaming mode, and day-long battery life. These were features usually found on much more premium TWS earbuds and the entry-level ones were usually plagued by dismal sound quality and wireless connectivity. Times are truly changing. Today, numerous budget truly wireless earphones under ₹5K offer compelling sound quality, decent Active Noise Cancellation performance, and reliable battery life. The competition in this category is extremely cutthroat, however, there can be only one winner that is crowned as the Best Performing Budget Truly Wireless Earphone in 2021. Let's find out who takes the title.

Winner: Realme Buds Air 2

Not only does the Realme Buds Air 2 offer up some of the enticing features present in mid-

range truly wireless earphones, but it also comes very close to matching up to the performance of its more expensive competitors. The Realme Buds Air 2 sports a 10 mm driver and the company selected a diamond-like carbon diaphragm that is usually found in higher-end headphones. In terms of sound signature, the Buds Air 2 have a V-shaped sonic signature tuning with a slightly boosted bass response and boosted highs in the 2 kHz-3 kHz range of the frequency spectrum. The bass response is exaggerated but it sounds punchy and lively without messing with the details of the mids too much. The mids are accurately reproduced resulting in vocals and lead instruments sounding clear and pristine. The ANC is great for the price and overall these earphones severely undercut many of the expensive TWS on the market, making it a deserving winner.

Runner Up and Best Buy: Soundcore R100

The Soundcore R100 managed to grab both the runner up spot in this category as well as the Best Buy recommendation from us. Priced at ₹1,999, the Soundcore R100 produces pretty impressive sound quality for its inexpensive price tag. You get a consumer-friendly V-shaped sound signature with punchy bass response, sufficiently detailed mids and crisp highs. The highs are produced quite well and even manage to beat out the winner in this segment in terms of clarity and accuracy. However, the bass response is slightly more over-exaggerated and the mids are slightly more recessed, therefore, the Realme Buds Air 2 snagged the win away from the Soundcore R100. The Soundcore R100 is our pick for the best value for money truly wireless earphone under 2K since it offers relatively good sound quality without breaking the bank.

2nd Runner Up: Oppo Enco Buds

The second runner up in this segment is the Oppo Enco Buds. The Oppo Enco Buds house an 8 mm dynamic driver and support the SBC and AAC codecs. They have a darker sound signature than the winner and runner up, so the bass is more pronounced while the mids and highs are more underemphasised, so there is a hit to the clarity and accuracy. They also have excellent passive isolation and the microphone performance is commendable for the price as well, therefore it lands at the second runner up position in this category.
