

4K QLED TV

Next level TV tech!

A few years ago, if you were in the market to pick up a QLED TV, your choices were limited to brands you could count on your fingers. In 2021 we've seen the launch of QLED TVs from a large number of brands such as Samsung, TCL, Xiaomi, Hisense and many more launching a number of TVs under their QLED umbrella. Needless to say, consumers are spoiled for choice when it comes to picking an LED TV. One of the biggest advantages of a QLED TV over an OLED TV is that QLED TVs can get a lot brighter than OLED TVs, making them a good option for content consumption in a well-lit room.

If you are in the market to pick up a QLED TV then you need not look beyond what we have here today

Winner: Samsung QN90A

The Samsung QN90A is one of the brightest QLED TVs we've tested; achieving peak brightness slightly below 2000 nits. Content consumption on this TV is sublime in both a well-lit room and a dark environment for a cinematic experience. The peak brightness of this TV not only makes HDR content stand out but also makes SDR content enjoyable. Under the hood, the TV has Samsung's Neo Quantum Processor 4K. It also has an Intelligent Mode that changes the picture preset to best suit the content being played. Those looking for colour accurate content also have access to a Filmmaker Mode on the TV. The TV supports HDR 10 and 10+ but does not support Dolby Vision. The lack of Dolby Vision support is in no way a deterrent to the overall performance of the TV. The TV also supports HDMI 2.1, bringing with it support for 4K at 120 Hz. It also has a UI enhanced for gamers when connecting a console to the TV. For audio, the TV has a 4.2.2 channel setup with 60 W of sound output. The TV can produce clear, loud room-filling sound. It runs on the company's own Tizen UI, which is easy to navigate and comes with support for smart assistants including Alexa, Bixby and Google Assistant.

Samsung QN90A
Price: (MRP):
₹1,75,990 (55-inch)

TCL C825
Price: (MOP):
₹1,49,990 (65-inch)

Xiaomi Mi QLED TV 75
Price: (MOP):
₹1,27,999 (75-inch)

Runner Up: TCL C825

The TCL C825 can get very bright, delivering a very good HDR experience while retaining good details in dark areas. We measured a peak brightness slightly above 1000 nits making the TCL C825 a great option for a well-lit room. It has very good colour reproduction for SDR content as well. While the colours aren't as accurate as the Samsung QN90A, they do a very good job when it comes to real-world content consumption. The TV has a very good sound output. And the speakers are mastered by Onkyo. They are front-facing, giving good sound output and the TV also has a subwoofer at the back. It also comes with two HDMI 2.1 ports with support for 4K at 120Hz, VRR and ALLM, making it a great TV for those looking to play games on a PS5 or Xbox Series X on this TV. The only place where the TV falters is with inconsistencies and bugs in the UI.

Best Buy: Xiaomi Mi QLED TV 75

The Mi QLED TV 75 offers users a large screen QLED panel with local dimming for the same price, and in some cases, cheaper than popular 65-inch LED and OLED TVs. It has a good panel for watching movies and TV shows, great Dolby Vision and SDR performance. Xiaomi's PatchWall UI puts content before the streaming service giving you a fluid user experience. The TV also comes with far-field mics for hands-free controls. While the speakers are loud and clear, for such a large screen TV, they lack channel separation. The TV is great for 4K 60 Hz gaming but does not have native 4K 120Hz support nor VRR, which is disappointing. It however does support ALLM. Overall, if it's a large screen experience you want, you should definitely consider this TV.
