

Gaming Headsets

Sound you can feel

The standout feature in gaming headsets this year was the presence of haptic feedback. Surround sound has already become ubiquitous in gaming headsets over the past few years. This year we tested numerous gaming headsets and the competition was close, but we have a clear winner. Read on to find out.

Winner: Razer Kraken V3 HyperSense

What makes the Razer Kraken V3 HyperSense stand out is the haptic in-ear feedback feature. While the feedback might be a bit much at maximum intensity, if you find your personal sweet spot, it can greatly enhance your overall immersion. For instance, firing an assault rifle or shotgun in-game has never felt more impactful. The sound quality is great, offering clarity, and depth, with an impressive soundstage to boot. You can further improve soundstage performance by enabling THX Spatial Audio. Audio reproduction is accurate across the board, making these a great pair of headphones even when you're not fragging noobs in-game. The mic on Kraken V3 is also fantastic, while certainly not as good as standalone microphones. The Razer Kraken V3 HyperSense's only flaw seems to be the fact that it's wired, which says a lot. For these reasons it's the Digit Zero1 award winner for the best gaming headset.

Runner Up: ASUS ROG Delta S

The ROG Delta S is based on the same design as last year's Digit Zero1 winner, the ROG Theta 7.1, but improves upon it while reducing the weight. The upgrades come in the form of a Quad DAC from ESSTech, and a MQA renderer for Hi-Res audio. While the ROG Delta S certainly takes the cake when it comes to music, it falls a bit short when it comes to gaming performance. Like most gaming headsets, the Delta S comes with virtual 7.1 surround sound. The results were a bit mixed, with the surround sound working well on some titles, but muddled on others. Overall though, we'd still say the surround sound is pretty good. Finally,

Razer Kraken V3 HyperSense

Price: ₹16,100

ASUS ROG Delta S

Price: ₹15,950

SteelSeries Arctis 7P

Price: ₹28,837

HyperX Cloud Stinger S

Price: ₹5,990

the ROG Delta S has an excellent microphone, featuring ASUS' AI-based noise-cancellation. Overall voice clarity was also good, but sometimes came across as hollow and soft.

Second Runner Up: SteelSeries Arctis 7P

The battle for the second runner up was a close one, with both the SteelSeries Arctis 7P and the Corsair HS60 Haptic going neck and neck on our test sheets, but we decided to give it to the SteelSeries Arctis 7P which had slightly superior audio performance, as compared to the HS60 which had a more superior mic.

The Arctis 7P comes with a 2.4GHz USB dongle, a detachable 3.5mm connector, and also features a Type-C dongle. The built-in spatial audio system only works on the PS5, which is what these headphones were designed for use with. Standard stereo performance is still pretty great on these headphones however, it is however a tad bass-boosted.

Best Buy: HyperX Cloud Stinger S

Priced at ₹5990, the HyperX Cloud Stinger S are a decent pair of mid-range wired gaming headsets. They've got a balanced sound profile that packs a punch to breathe life into action scenes in games. They're comfortable for long periods of use, and work well with all mainstream consoles. The microphone is fantastic, and good for use even in noisy environments. Plus, you're getting 7.1 surround sound at an inexpensive price making it our best buy.
