

FOR THE GAMERS

We talk to Anand Subramanya from Dell on 25 years of Alienware and its journey in India

Soham Raninga | soham@digit.in

A brand that needs no introduction when it comes to gaming. Alienware has been at the forefront of building gaming PCs for hardcore gaming enthusiasts for the past 25 years. Anand Subramanya, Director – Product Marketing, Consumer & Small Business for Dell India talks about what makes the brand so appealing to the hardcore gamer and what gamers can expect from the brand going forward as it completes 25 years in the gaming arena.

Q As an Iconic gaming brand, Alienware is known for pushing the boundaries when it comes to PC gaming hardware, how far has Alienware managed to build that connection with the gaming enthusiasts in India?

Anand: We have been at the forefront of shaping the gaming industry for more than 25 years with Alienware. Gaming has certainly seen growing interest globally as well as in India. While the ecosystem is coming together in India, we have been en-

gaging with the gaming community closely to grow the overall ecosystem.

Over the last decade, we've had the privilege of nurturing the growth of esports globally. Alienware and Team Liquid have partnered for the last 10 years on this phenomenal esports journey. As per a report by EY, the esports industry is expected to grow at a compound annual growth rate (CAGR) of 46% to touch 11 billion by 2025. With this phenomenal growth comes significant job opportunities too, and not just for the players and trainers. It takes thousands of software engineers, content creators, data analysts, game designers, social media specialists, venue operators,

accountants, lawyers, and more to make the world of esports turn.

To further drive this growth, in India we have leveraged our partnership with Team Liquid and Ankit Panth from Team Brutality to host gaming masterclasses during our ongoing 3rd edition of Dell Futurist. It is a program for college-goers who wish to develop careers in the field of gaming and entertainment. One can register and get access to subject matter experts in gaming or even interact with e-sports team leads like Ankit. In last year's edition of the Alienware #LevelUp challenge, we saw participation from over 100 squads from various parts of India where Team Mighty emerged as the winner.

Q With the PC Gaming industry growing and evolving at a rapid pace, how has Alienware's portfolio adapted to the change and shift in preferences?

Anand: Alienware brand stands for bold innovations, high performance, Iconic design & premium quality, besides leading the segment with tech innovations, like Alienware Cryo-Tech™ cooling technology, Alienware command centre, etc. Over the years, you've seen us make some radical upgrades to our Alienware family. From unveiling Alienware Area 51m, the most upgradable, overclockable laptop with desktop-grade performance, to the world's first gaming laptop designed in collaboration with CHERRY MX to debuting the brand-new X-Series family – our
