

Hamilton PSR MTX Limited Edition

When The Matrix movie originally released in 1999, it started a new trend in fashion with the blacked out trenchcoats, and sunglasses. The latest iteration of the movie is all set for its release later this month and those same trends are back. Hamilton is all set to capitalise on it with their new limited edition Hamilton PSR MTX watch. The watch has been designed in close collaboration with Warner Bros to give this limited edition watch the look and feel that would make it fit right into The Matrix universe. The black and green theme that the original movie so successfully popularised is present in spades on the PSR MTX with almost all of the watch including the metallic strap getting

a deep black Physical Vapor Deposition coating. Overall the watch has an extremely minimalistic look with the watch face being dominated by the hybrid LCD and OLED digital display that displays the time in the iconic Matrix green. On the bottom right, under the display you can find the engraved Hamilton branding. The minimalistic look translates to the buttons as the PSR MTX has just one on the right. There is another Matrix-esque easter egg which can be found on the screw-down caseback featuring the falling computer code lines that the movie so prominently showed off. If you wish to wear this timepiece to the debut of the movie, it will cost you approximately ₹81,000.

LG DVLED display line

So you're in the market for a decked out home theater system and the usual 75-inch TVs and 100 inch projectors seem too puny. Well, in that case how does a wall sized 325-inch LED with 4K or even 8K sound? LG recently announced their first-ever Direct View LED (DVLED) display series that delivers just that. Dubbed the "Extreme Home Cinema" line-up, these displays are for high end residential installations featuring 2 - 33 million individual diodes depending on the resolution and size. They are touted to deliver superb performance and exceptional brightness and differ from LED TVs which use LCD panes for backlighting and brightness while their DVLED line directly uses the LED diodes to create the image. What that means is better contrast and brightness for the most vivid images. The line-up is available in multiple configurations and sizes ranging from 81 inches to 325 inches in a 16:9 aspect ratio. It is also available in an ultra stretched 32:9 aspect ratio which makes it ideal for viewing multiple video sources simultaneously like live sports. The LG DVLED Extreme Home Cinema Displays are only available via the new custom installation dealer program and cannot be bought at your nearest LG outlet. Now that's exclusivity.

Ferrari Daytona SP3

Commemorating one of the most iconic victories from arguable the most iconic automobile manufacturer, the new Daytona SP3 from Ferrari is one hunk of a machine to behold. This limited edition model will only ever see 599 units manufactured, making it desirable enough to have automobile enthusiasts salivating. The car is named after Ferrari's landslide victory at 1967's 24 Hours of Daytona where Ferrari monopolised the podium places (that is 1st, 2nd and 3rd) and costs a whopping €2 million. The race event not only inspired the car's name but it also gets a ton of design queues from the actual race cars that won. For example, the low-set wraparound windscreen and the placement of the wing mirrors on top of the front wheel fenders hark back to the 330 P3 and 330 P4 race cars that raced in 1966 and 1967. The historic queues are present in

the engine and power department as well as Ferrari ditches hybrids in favour of a great big 6.5 litre naturally aspirated mid-mounted V12. Mated to a 7-speed automatic gearbox, this engine delivers 840hp and 697Nm of torque capable of propelling the SP3 to a top speed of 340kph and 0 to 100kph in 2.85 seconds.
