

SECURITY WATCH

Don't save your passwords in browsers

Using your browser to store your login credentials for various sites may be convenient, however, this poses a severe risk to your security. A malware named RedLine is a glaring example of why this is such a serious issue. RedLine is an information-stealing malware that targets popular browsers such as Google Chrome, Microsoft Edge, and Opera. The malware is easily available to purchase for roughly \$200 on cyber-crime forums that are littered with fraudsters. It can also be deployed without having in-depth knowledge and with very little effort. A recent report by AhnLab ASEC warns users against saving their passwords on their browsers. The report stated an example where a remote employee's VPN account details were compromised due to the RedLine malware. The acquired information was then used to hack the company's network three months later.

MOBILE WATCH

OnePlus 10 Pro

OnePlus has started accepting pre-orders for the OnePlus 10 Pro in China. The OnePlus 10 and OnePlus 10 Pro flagship phones are expected to launch in China in January followed by a global launch in March/April. The phone was leaked previously giving us a brief look at the specs and early renders. The OnePlus 10 Pro features a 6.7-inch LTPO AMOLED display that offers QHD+ (3216x1440 pixels) resolution and supports a 120Hz refresh rate. The phone has a thickness of 8.7mm as per a previous leak by OnLeaks, and the full dimensions are 163.2 mm x 73.6 mm x 8.7 mm, which are the same as the OnePlus 9 Pro. The OnePlus 10 Pro is said to feature three cameras on the back which consists of a 50MP main camera with OIS and laser autofocus, a 48MP ultra-wide camera and an 8MP ultra-wide camera with 3x optical zoom. On the front, there is a 32MP selfie camera. The OnePlus 10 Pro will come equipped with a 5,000mAh battery.

APP WATCH

AetherSX2

This PlayStation 2 emulator is available as an early access app on the Google Play Store. In order to use the emulator, developers have recommended that you use a phone with a Snapdragon 845 or better processor. This means you will need a smartphone with somewhat high-end specs. If your processor isn't a Snapdragon one, check its specifications and ensure that it at least has 4 large cores (with a

single-core score of 500 or more on Geekbench). The developers have also mentioned that if you have two big cores (for example, Snapdragon 700 SoCs), you must avoid enabling multi-

threaded VU to ensure decent performance. Devices with Mali or PowerVR GPUs will run the app but the performance will suffer when compared to those with Adreno GPUs and you will

also not get dual-source blending.

The AetherSX2 functions like most emulators do. All you have to do is get a ROM of the game you wish to play, load it into the emulator and then voila!

You'll be playing the PS2 game on your smartphone. The emulator also comes with some excellent features such as internal resolution scaling, multiple saves, patches for games without support, touchscreen and Bluetooth controller support, and per-game settings. The app is still in early access, so you may face occasional issues but this is still one of the best PS2 emulators for Android you can find.

Tracker Detect

Apple has launched the Tracker Detect app for Android that can scan for nearby AirTags and devices on the Apple 'Find My' network. If you sense that your location is being tracked, you can scan your surroundings to be sure.

Brainstorm: Creativity Trainer

Brainstorm: Creativity Trainer keeps track of your sessions in a fun and colourful way. It can even be used as a note-taking app. One thing that would definitely make this app better is a dark mode.

HeyPal

HeyPal allows users to practice foreign languages by speaking to native speakers of that language. The native speaker can help correct your grammar. There's also inbuilt translation and error correction on the app.
