DISRUPTIVE FINTECH STARTUPS

Companies that are revolutionising the finance sector

Priyanka Srinivas | feedback@digit.in

T

he term “fintech” has been around for a long time, but it is worth revisiting the industry in light of

quickly expanding technology and a slew of new companies. The financial technology industry includes both technology-enabled financial services providers and organisations that provide technology services to financial institutions directly. Fintech companies use technology to help businesses and consumers conduct financial transactions.

It is far from surprising that the number of fintech companies and startups is increasing. As the tech-savvy millennial population has grown older, banking and financial alternatives have evolved as well, with once-rare perks like mobile banking becoming standard, driving traditional financial institutions to become more tech-savvy. Banks are not the only financial entities that have changed as a result of technological advancements. Digital financial access underpins whole markets, from digital loans and mobile stock services to e-commerce payment networks and digital currency exchanges.

At the head of this mass digitisation for financial services lie some of the biggest fintech startups in the world in 2022. The following are some of the best startups having their

unique and efficient solution to a problem tried, tested and solved by traditional methods.

EPIFI TECHNOLOGIES (AKA FI)

Fi partnered with Federal Bank to bring a banking 2.0 solution to the modern generation of technology. It includes a savings account with no balance that can be registered and activated without visiting a bank. It assists you in keeping track of your spending, growing your money, and organising your finances. It also has specific unique characteristics that can change the way money is handled in the financial world. With multiple money management features, users can rest confident that their money will work for them in a better, more efficient way thanks to applications like Fi altering the neobank environment with its strikingly simple, intuitive, and relevant money-management capabilities.

INDIFI

Indifi is a Non-Banking Financial Company (NBFC) that provides small and medium-sized businesses (SMEs) with business loans at an interest rate of 18 percent and higher. The organisation offers term loans to companies to help them overcome financial difficulties or expand. Indifi provides term loans to businesses that are unable to furnish collateral. Indifi provides customised loans for travel, hotel, e-commerce, restaurant, trade, and retail companies.

indifi

The cash received will be utilised to better serve consumers, find new MSMEs, and invest in technology and product development. There are over 63 million MSMEs in India, and the majority of them encounter microcredit issues, making it difficult for them to efficiently manage and satisfy working capital needs. Indifi is tackling this issue by continually inventing and introducing new goods inside existing sectors and entering new markets with its core offering.

KARZA TECHNOLOGIES

karza
TECHNOLOGIES

Karza Technologies, a banking and business

information tools provider, helps lending institutions make better loan decisions. By gathering a borrower's financial history and employing Big Data and machine learning to precisely forecast how a borrower will perform with a specific loan, the firm supports lending institutions in solving crucial issues such as non-performing assets (NPAs) and loan frauds.

The organisation compiles data from over 1000 publicly accessible sources into a single location, which can subsequently be shared with banks and other institutions. Over 50 clients utilise these databases to offer authentication, analytics, and recovery services.

NERVE SOLUTIONS

The global growth of the RegTech sector has been fueled by rising volatility and a high number of fraudulent operations. Regtech products have become more popular as the requirement for risk and compliance management has grown. Nerve Solutions is
