

Tesla CEO's net-worth soars

Elon Musk's net worth rose by \$33bn in a day as Tesla broke all previous EV delivery records. <https://digit.in/jan22-77>

Microsoft release Y2K22 fix

Microsoft has released a fix for the Y2K22 bug that was affecting Microsoft Exchange servers. <https://digit.in/jan22-78>

a Fintech
and Regtech
consultancy

and development organisation that specialises in financial market risk management and automated trading tools. Additionally, it offers developers tools and APIs to enable brokers to provide tech-enabled solutions to their end clients. It is partnering with some of the largest financial services companies in the western region of India.

FINNEW SOLUTIONS PVT. LTD.

Finnew Solutions has introduced Niyox, a mobile banking solution for millennials, in collaboration with Equitas Small Finance Bank and Visa. Niyox is India's first neo-banking

platform. It comes with a VISA Platinum Debit Card, a 7 percent p.a. interest rate on account balances, and no minimum account balance. A Niyox account also gives you access to a comprehensive wealth management suite. Niyox Money's comprehensive wealth management suite includes zero-fee mutual funds, the ability to track all of your investments in one location, robo advising, and an analysis of your assets, savings, and spending. Domestic and foreign stocks will be available soon as well.

XPEDIZE

Xpedize, a fintech firm that improves on existing invoice discounting methods, offers Software as a Service (SaaS), which connects buyers,

XPEDIZE®

suppliers, and financiers on a single platform, where providers give dynamic cash discounts in exchange for early payment on acceptable invoices. Xpedize's platform connects buyers, suppliers, and financiers to find a cash discounting rate, either through supplier-initiated requests or the unique Algo-based Auction, which can be completed with the buyer's own funds or financed through Banks or TReDs via the Xpedize platform. The digitisation of the whole ecosystem reduces the time spent on manual labour as well as the mistakes that result from it.

REFYNE

Employers use Refyne to provide their employees real-time access to their earned income. An employee may log into Refyne to see how much money they've made in a week and withdraw a portion of it whenever they choose. Employees may take control of when they are paid with an EWA solution, allowing them to fit their pay dates with their own financial obligations. Employees may acquire emergency money if a surprise cost or need arises, without creating further debt, thanks to rapid access to funds whenever needed.

It also makes the job of the employer easier since he or she will not have to spend time dealing with employee pay demands prior to payday. This time may be put to better use for the company's other operations.

KREDITBEE

In a culture of growing independent small businesses, taking loans is a tedious process because of the various rules involved due to employment. To tackle this problem with a combination of personalised loan recommendations and self-employment status, KreditBee has come up with an innovative platform to digitise the process of taking personal loans.

First, the user has to sign up to the KreditBee platform with some standard verifiable parameters like a phone number. Then they have to

get their profile verified, upload basic documents along with bank account details and successfully submit their application for a loan. This simple five-step process can get you a loan from the comfort of your home.

IDFY

Security is an important aspect in the fintech sector, considering the type

and amount of data that needs to be processed and transferred. Overall, the probability of a security breach occurring on the part of a fintech company may be higher than in a strictly regulated bank. To tackle this security and enforce so much more, IDfy assists individuals and businesses in forming genuine connections by guaranteeing that both parties are who they say they are and can be trusted. IDfy's products reliably identify entities and validate their credentials, detecting and preventing fraud at the source.

REACH52

reach52's workforce is primarily rural women known as "community agents", and uses a suite of mobile applications to connect families to inexpensive medicine, treatment, and education on healthy living. They are at the forefront of efforts to offer health care to disadvantaged areas. These community agents have an offline-first mobile system that allows them to enrol members and offer products and services to communities while on the go. To leverage the platform and provide comparable and scalable health services across low- and middle-income nations like the Philippines. Reach52 collaborates with pharmaceuticals, med-tech, consumer health, and financial service providers.
