CLEAN UP YOUR WINDOWS 11 PC

LOCAL ACCOUNTS ON WINDOWS 11

Most tech giants and corporations are infamous for trying to coerce the consumer to use their ecosystem trying to lock them in it. With the advent of Windows 11, Microsoft notoriously requires the user to set up a new Microsoft account. For many users, this maybe an unreasonable requirement, considering Windows 11 already costs upwards of \$100 and yet it ships with a lot of preinstalled apps and is always prying on the user with unnecessary telemetry. Here is a way to bypass it and make a local account, similar to Windows 10.

Step 1: Disconnect all forms of internet connection to the device during setup

Step 2: Press Shift + F10 to launch the Command Prompt. Then type in the command taskmgr to launch the task manager.

Step 3: Now scroll down and find Network Connection Flow. End this task.

Step 4: Close Command Prompt and Task Manager. Windows skips the step requiring logging into a Microsoft Account.

Make a local account as you normally would and continue with the setup.

DEBLOATING WINDOWS 11

Windows is infamous for bundling bloat, unnecessary software on Home editions. This can be a hassle for many users, especially for people running low spec machines, as it can slow down their machines. Fortunately, a developer with the username builtbybel created a user-friendly tool called ThisIsWin11. (<https://dgit.in/thisiswin11>). This makes it easy for users to uninstall several useless packages and has some other nifty features. Install ThisIsWin11 from the releases on the Github page. Here are some handy features included in it.

Disabling Unnecessary Features

Under the customise windows 11 tab, users can

remove the services they don't need or desire. Under each section, there are features that the user can tailor according to their needs.

Uninstalling Useless Packages

Under the PumpedApp section, the user can remove Windows 11 packages that aren't needed. The most efficient way to do this would be to move all packages to the recycle bin and then carefully select the packages that are needed back to the left column as per use case (Eg, Gamers would want to move all Xbox-related packages to the left column). However, ThisIsWin11 does not purge packages necessary for Windows to function, so it is entirely safe even if all packages are purged.

Quick Install Required Packages

It also provides a one-tap
