

option to “Left”. Boom. Now you have every app to the left side just as it was since the beginning of time.

Now, you may be a part of that niche group who just isn’t satisfied with moving their icons left or right. You need

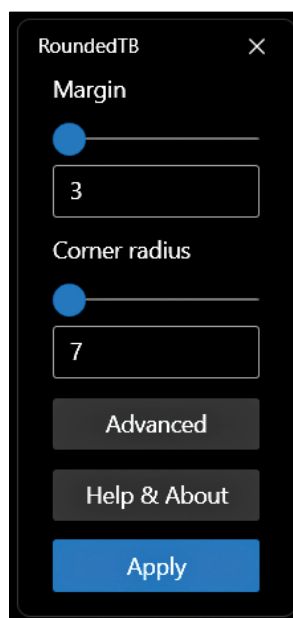

If you play around with the “Border Radius” slider, you’ll essentially get a more “curved” taskbar. If you play with the “Margin” slider you’ll be able to control the thickness of the taskbar. Here’s a screenshot of the taskbar

more. You need full control! Well, we’re here to quench the thirst of customisation too. Allow us to introduce RoundedTB and TaskbarX.

RoundedTB is free to download and use and you can get it from Microsoft Store however, TaskbarX is a paid app if you get it from the Microsoft Store. If you’re willing to download it from the developer’s website - (<https://dgit.in/taskbarx>) you won’t have to pay a dime.

RoundedTB

RoundedTB is a simple app to use. It allows you to change the way that the Taskbar looks but by adding margins and borders to it. Install the app and open it.

with both of those sliders (almost) maxed out so that you get the idea of what we’re talking about.

Another feature that is implemented in the app which is exclusive to Windows 11 is the “split” taskbar mode. This will essentially make the taskbar more like a “dock” than a “bar”. Click on the “advanced” button and turn on “Dynamic Mode”.

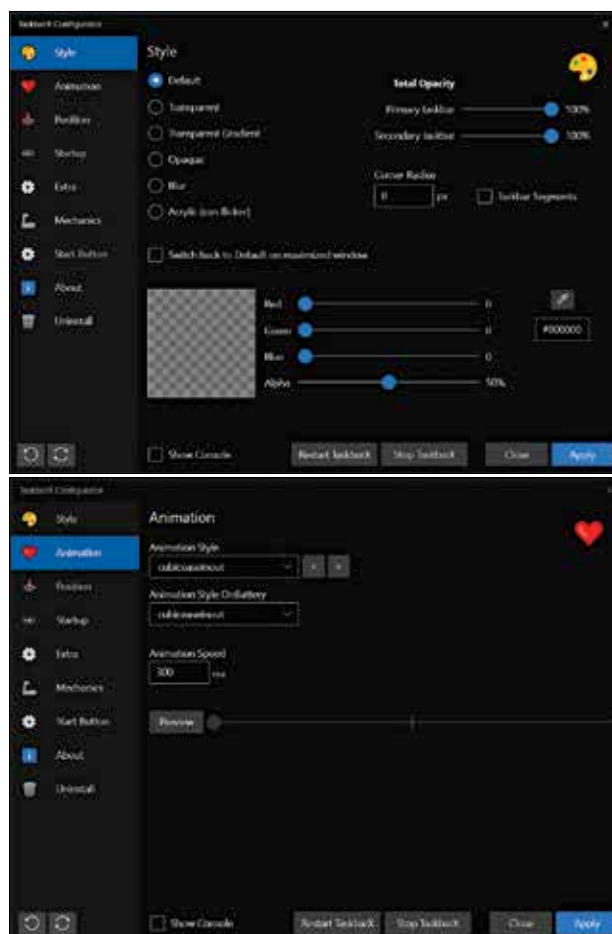

As you can see above, this will make the taskbar transparent on the places where no icons are placed hence making it look like a dock. The reason why it’s called Dynamic Mode is because the transparent area will resize itself based on the number of apps present in the taskbar.

TaskbarX

While RoundedTB changes the look and feel of the taskbar, TaskbarX changes how you interact with your taskbar. By default, Windows allows you to only position your icons to left or centre but with TaskbarX you can have your icons wherever you want. You can even control the finer details such as where an icon would show up if it’s added or removed.

After you’re done installing TaskbarX, open up the “TaskbarX Configurator.exe”

From here, you can control each and every little

aspect of your taskbar. You can give it a gradient, or make it completely transparent or even translucent!

If you navigate to the other menus like Animations, Position, etc. to customise your taskbar as per your liking. We personally like to play around with the Animations tab and make our own custom animation for the taskbar popping in and out.

THEMING YOUR START MENU

Start Menu is an integral part of Windows and it almost goes hand in hand with Windows. Microsoft replaced the Start Menu entirely with Windows 8 and that caused a lot of backlash from the community. They finally had to bring it back in Windows 8.1 and the iconic Start Menu has been the same ever since. But, Micro-

soft decided to revamp the Start Menu completely in Windows 11 giving it a more app-centric approach and, of course, that didn’t bode well with some people.

Some people decided to give a revamp to the Start Menu while giving the user the ability to customise and change every aspect of it. We’re here with ValliStart - Your Start Menu Replacement and trust us, you’ll love it.

To install ValliStart, you first need to install Rainmeter from (<https://dgit.in/rainmeter>). After downloading and installing, it will place some widgets by default on your Desktop. You can remove them by right clicking them and clicking on “unload skin”.

After you’ve removed all of them, head on over to this site: <https://dgit.in/vallistart>. Click the download
