

button. You will need to have an account on this site to download stuff from it. If you don't then just simply make one and you'll be all set.

Once you've downloaded the file, click on it and an installer should pop up. Just hit "Install" and you'll be set (almost).

After that, you'll be prompted to install JaxCore from this screen. Just follow the on-screen instructions for it and you'll be good to go.

If all went well, you should end up with this screen in front of you.

Scroll down till you find the option of "ValliStart" and click on it. The first thing you have to do here is go to General > Customize how to activate ValliStart > (click) Separate

Module. This ensures that if you press the Windows key you'll get the regular start menu and if you press Win+Q you'll get ValliStart. There's also an option to override the Start key so that only ValliStart shows up but we found that to be a bit buggy. Now, return from that screen to go to the homepage.

From here, you can customise LITERALLY each and every aspect of the new Start Menu down to the Windows Logo in the Start Menu.

After doing some tinkering, this picture on the right is the final result that we came up with. In our honest opinion, it looks a heck of a lot better than the stock Start Menu.

MISCELLANEOUS TIPS

NEW SHORTCUT KEYS

- **Windows + A**
It opens the new Windows quick settings menu instead of the action centre
- **Windows + N**
Opens the calendar and notifications menu
- **Windows + Alt + Up Arrow / Down Arrow**

Snaps a window to the upper or lower half of the screen

- **Windows + K**
It opens the wireless screen-cast menu
- **Windows + H**

Launches voice type feature which allows the users to dictate in a text field.

QUALITY OF LIFE ADDITIONS

1. Twinkle Tray

Twinkle Tray makes it simple to control the brightness of many displays.

This programme adds a new icon to your system tray that you may click to have rapid access to all compatible displays' brightness levels. These brightness sliders can change the brightness of one or all displays at the same time, making it very handy for users with multiple monitors. It also allows users to bind hotkeys for lowering or increasing brightness and also provides automating brightness levels depending on the time of the day. Combined with automating the night light feature, provides for a solid setup for the user.

2. Modern Flyouts

Modern flyouts is a simple Microsoft store app that overrides the default flyouts with more customisable and modern looking flyouts that fit in with the UI design philosophy of Windows 11. It allows the user to change its behaviour in terms of look and func-

tionality from the theming to the timeout period and what kind of flyouts the user wants to customise and change.

FILES

Files is an alternative file explorer available on the windows store with a cleaner UI and more functionality, including long demanded features like tabs, a separate section for WSL and seamless integration with cloud storage. It also has a simple setting toggle to make it the default file explorer without having the user go to the registry editor and changing keys in it, making it extremely user friendly. With its user-friendliness, it is a great alternative to traditional windows explorer.

POWERTOYS

Windows PowerToys is a bundle of experimental yet nifty features developed by Microsoft which enhances and streamlines the user experience in many ways. It includes features like a Universal Color Picker, Apple spotlight like search utility called PowerToys Run, its own implementation of snapping windows called Fancy Zones and many more. It's a completely open-source project giving users the ability to contribute and add their own features.

NOTEPADS APP

Notepad++ app aims to be a modern, minimalist and lightweight notepad app. It has a built-in tab system with a very modern UI unlike the traditional Notepad app on windows or even Notepad++ which has been a popular alternative choice amongst users. **d**
