Apple iPhone 13 Pro

A pricey affair

There are smartphones, and there is the iPhone! However, is the latest iPhone much better than the best that Android flagships have to offer today? Through this review, we'll try and answer this question, and in the process, hopefully, help you understand if the iPhone 13 Pro is indeed the phone for you.

DESIGN AND DISPLAY

For the iPhone 13 Pro, Apple decided to not mess with a winning formula. There are some differences though. The first is a smaller notch, and the other big change is the arrangement of the lenses in the camera module.

There are other changes too. For example, the iPhone 13 Pro comes with Ceramic Shield on top of the display, which is more resistant than other screen security solutions. There's also IP68 water and dust protection.

Let's move on to what we believe is the most striking thing about the iPhone 13 Pro – its big, bold and beautiful display! The iPhone 13 Pro comes with the same 6.1-inch display. There's a Super Retina OLED panel with a resolution of 1170 x 2532 pixels.

The iPhone 13 Pro also gets what Apple is calling the Pro Motion Display. This enables the phone to dynamically switch between multiple refresh stops between 10Hz and 120Hz.

So, how does the iPhone 13 Pro's display perform? The phone's panel is one of the best we've used in a long time. It looks vibrant, the colours pop and it also gets plenty bright, all without losing colour accuracy. In the ColorChecker Analysis, the iPhone 13 Pro threw up good results for sRGB content with an average DeltaE of 2.6 and max within acceptable levels – DeltaE of 4.4. Results were a little less impressive for HDR content as the phone threw up an average DeltaE 4.1 and a maximum of 6. As far as gamut coverage goes, the phone offers good coverage across the

sRGB and DCI-P3 space, with all of these things coming together to create good visual experiences.

PERFORMANCE AND BATTERY

The iPhone 13 Pro gets the new A15 Bionic SoC that promises some serious upgrades over its predecessor.

In real-world usage, the performance was comparable to the iPhone 13, with games running like a charm on the device. We ran Call of Duty Mobile and Asphalt 9 Legends on the phone, and with Gamebench powering on the background only to realise both the games ran flawlessly on the phone. However, when we moved to other benchmarks such as AnTuTu and Geekbench, the iPhone 13 Pro for some reason threw up slightly lesser scores than the iPhone 13.

Our performance testing also saw us examine the battery prowess of the iPhone 13 Pro. In our time with it, we achieved stellar standby times on the iPhone 13 Pro, with the phone also lasting well over a day on moderate usage. The only gripe is that fast charging caps out at 20W.

CAMERAS

Coming to the cameras, we have three 12-megapixel lenses on the back of the phone. All three lenses leave you with very little to desire. Both the primary and the ultrawide lenses offer some of the best shots that any smartphone can click today. The iPhone 13 Pro's lenses working in tandem with the new A15 Bionic chip's computational photography algorithms produce fantastic results. The resultant shots capture a lot of detail and accurate colours.

The new telephoto lens offers 3x optical zoom that's better than the magnification on the iPhone 12 Pro. The phone can do really good telephoto shots, that'll be more than good enough for most users.

Talking about the selfie lens, we have another 12-megapixel camera on the front of the phone, which can capture a good amount of detail and accurate colour tones.

There's no oversharpening of textures too.

VERDICT

The iPhone 13 Pro is arguably the best smartphone in the market right now, save for the Pro Max. It offers great cameras, pow-

erful performance, a brilliant display and a big battery. These combined make the iPhone 13 Pro a brilliant buy. However, starting at ₹1,19,900, the iPhone 13 Pro does not come cheap. This makes it difficult to recommend as there are multiple phones in the market right now which offer slightly lesser overall value but at a much affordable price point.
