Redmi 43-inch FHD Smart TV

Does a 43-inch FHD TV shine in a sea of budget 4K HDR TVs?

The 43-inch TV market is a very interesting one. Not only is it still one of the most popular screen sizes for consumers in India, but it is also one where consumers have the option between a full HD TV and 4K HDR offerings. Today we have with us the Redmi 43-inch TV for review. It has a Full HD display and comes with Xiaomi's own PatchWall UI. Let's find out how it performs.

BUILD AND DESIGN

The TV is held in place by 2 plastic feet and has glossy plastic bezels which aren't too thick. For connectivity we have 2 HDMI ports, 2 USB ports, AV in and an ethernet port along with an antenna port. There is also Bluetooth and dual-band Wi-Fi, which is nice. Overall, it is a simple looking TV and that's alright for the price.

UI

If you've used a Xiaomi TV in the past, you should feel right at home with the UI. It offers the best of both Android TV and the company's own Patchwall UI. While PatchWall has cemented itself as a good alternative to Android TV, the experience on the Redmi 43-inch TV is a bit laggy.

DISPLAY PANEL QUALITY

The Redmi Smart TV 43 has D-LED backlighting and we recorded a peak brightness slightly below 250 nits which is more than sufficient for SDR content. In our Calman analysis, we found that the Movie preset gave us an average delta error of 2.2 which is pretty good.

PERFORMANCE

Since the TV does not support HDR, all the content we consume in HDR was played in SDR. All the content on the TV looks quite enjoyable and even though the TV does not have dimming zones, a little bias light in the room

ensures you get the best the TV has to offer.

The Movie preset presented the best colours for most of the content we consumed. If you are looking to leave the TV on one setting, then we recommend keeping it on Movie with the back-lighting bumped up slightly.

As for gaming, we hooked up a PS5 to the TV and the output we got was 1920x1080p HDCP 1.4 with RGB colours and naturally, no support for HDR. Once again, the experience we got from the console was quite good. You are presented with some very punchy colours and the overall gaming experience on this TV is good.

Audio performance is where the TV falls short like most budget TVs but the output isn't unacceptable for the price. While the TV has just 20W of sound output they are clear which is important. We received an update during the course of this review which "Improved the audio performance". When watching movies and TV shows the dialogues were clear and even during mixed audio, you can make out what characters on screen are saying. While an orchestral background score suffers at high volumes and there is no channel separation between the

speakers for an immersive experience, the overall output is acceptable for everyday TV use.

VERDICT

The Redmi 43-inch FHD Smart TV is a good TV overall. Not supporting 4K and HDR is not a con

in this case as its picture performance is very good in SDR and better than some 4K HDR TVs we've tested in this price range. It has good colour reproduction and the panel works well for movies, TV shows and games. The audio output is fine for everyday use. The only downside to the TV is that the UI can get laggy. The Redmi 43-inch FHD SDR TV is a very good option for those that understand the drawbacks of a budget 4K HDR TV and who want a TV that can reproduce content well.
