Apple iPad Mini (6th Generation)

Small wonder

Apple's iPad mini has been an interesting device for those that are looking for a tablet-like experience but don't want to venture into the 10-inch space. While the iPad mini is an interesting device, the question we need to answer is who is this device right for and more importantly, in a world where we have the Samsung Galaxy Z Fold 3 smartphone, do we really need a separate smartphone and table? Let's find out!

BUILD AND DESIGN

Keep the iPad mini and the iPad Air 2020 next to each other and the iPad mini looks like a "Mini-me" of the iPad Air 2020. The device has a very clean symmetrical design with beautiful curving edges. It has a better in-hand fit than its predecessor and is surprisingly comfortable to hold with one hand for reading books or articles.

Speaking of holding the device, it has slightly thick bezels on the front and this is not a con. Since you will literally hold the device, you don't want your thumb blocking the display or accidentally touching the screen.

The aluminium enclosure gives the device a very premium finish overall and the build of the device is nothing short of stunning.

DISPLAY

Starting with the display, the iPad mini has an edge-lit display. It has Apple's Liquid Retina display with a 2266 x 1488 resolution with 326 PPI.

The display on the iPad can get plenty bright for watching movies and TV shows and bright enough for some outdoor use, but considering the stunning OLED displays on the iPhones and the Mini LED display on the iPad Pro, we feel it was a missed opportunity for Apple to make the iPad mini one for the cinephile. You will notice some blooming when consuming content in a pitch-dark room, but only

those looking for an e-reader. But the one place that we were happily surprised is with gaming on the iPad. Apple Arcade has some hidden gems and you should definitely give it a go.

BATTERY

While Apple claims the same 10-hour battery life for the iPad mini. We could manage to get anywhere from 5 to 7 hours of continuous use of either watching movies, TV shows, playing games, reading books and running the occasional benchmark here and there.

CAMERA

The iPad mini has a single 12MP rear camera and a 12MP front camera.

While we wouldn't replace our smartphone camera with the

iPad mini camera, we can tell you that the camera can take good photos in well-lit situations, but in low lit situations, the camera takes noisy images that lack detail.

when the brightness is bumped up. The blooming isn't visible at all if there is a little light in the room or the brightness is low. The display supports Dolby Vision and the colours look great. Overall, watching content on the device is a treat.

Coming to the audio, this iPad mini can get loud but not as loud as the iPad Air. You can place this on the bed and a few people can enjoy a movie on the tablet. When consuming content in landscape mode you do get good channel separation and the overall experience is good.

PERFORMANCE

The performance of the iPad mini really depends on what you'd like to use it for. The mini is the quintessential small screen entertainment and gaming device in our opinion. So, while checking mails can be easy on it, it's the typing experience on the mini that suffers a bit. While the keyboard is nice and big in landscape mode, it occupies too much of the screen for comfort and long typing sessions.

But for other tasks, the device is sublime. It's also a great device for

BUILD	90

VERDICT

Recommending the iPad mini is a no brainer for someone that wants a content consumption device to accompany their small screen phone. If you like to snuggle up in bed late at night with a device to catch up on movies, games and reading and want a device slightly bigger than your phone, then the iPad mini can be your new best friend.
