Oppo Enco M32

Struggles to compete with its predecessor in terms of sound

The Oppo Enco M32 is the successor to the highly acclaimed Oppo Enco M31. The Oppo Enco M31 managed to impress most reviewers and users primarily due to its sound quality. However, with the Oppo Enco M32, the company has decided to drop a pivotal feature that was present in the Oppo Enco M31 – LDAC codec support. The earphones are also not Hi-Res certified, unlike its predecessor. So, let's see how these changes affect the performance of the newly-launched Oppo Enco M32.

BUILD, DESIGN AND COMFORT

The Oppo Enco M32 are a simple-looking pair of neckband style wireless earphones with a rubber neckband, matte black plastic modules or weights on either side, and glossy black earbuds. The rubber neckband bends to match the contours of your neck and sits there pretty comfortably. The left one houses the Oppo logo while the right one has the controls, USB-C charging port and an LED light.

As for the earbuds, the nozzles are angled inwards allowing them to sit securely in the wearer's ears. The earbuds also have a silicone loop or wing that adds to the fit and makes it feel more snug and secure.

FEATURES

The Oppo Enco M32 has some pretty great features up its sleeve. First, we have IP55 dust and water resistance. So, you can use these buds in various scenarios such as when you're working out, in rains, during camping, trekking, and more without having to worry about damage from dust or water.

You can also quick switch between paired devices by holding down the volume keys simultaneously, which is the next best thing to multipoint connection. You also have inline controls

on the right plastic module of the neckband earphones. These buttons can be used to pause/play music, increase/decrease volume, activate voice assistant, answer/decline phone calls, and move between tracks.

PERFORMANCE

One of the main attractions of the Oppo Enco M31 was LDAC codec support that offered high-resolution audio streaming. However, this is absent on the Oppo Enco M32 resulting in lower-quality audio. The ramifications of this change are apparent when listening to the Oppo Enco M32. Not only is the audio quality much less detailed but also the imaging suffers.

As for the sound signature, the Oppo Enco M32 is equipped with a 10mm dynamic driver with a composite titanium-plated diaphragm. The earbuds have a V-shaped sound signature with massively boosted bass response and boosted highs. The bass response is boosted from 20Hz - 250Hz and ends up sounding pretty muddy. Additionally, the boosted bass also negatively impacts the mids. The highs are well-produced with good sparkle but the spike in the frequency response from 7kHz - 8kHz causes some auditory fatigue.

The Oppo Enco M32 is powered by Bluetooth 5.0. The Oppo Enco M32 provides good wireless range and they

have minimal latency when watching videos or playing games.

The earbuds are equipped with an omni-directional MEMS microphone that does a decent job. The speaker's voice is loud and audible but there is some distortion at times.

BATTERY LIFE

If there's one area where the Oppo Enco M32 shines, undisputedly it's battery life. The Oppo Enco M32 is capable of a whopping 28 hours of wireless playback time. In our tests, the earphones lasted 29 whole hours, albeit we were listening to the earphones at 40-50 per cent volume. Not just that, the Oppo Enco M32 also supports fast charging. So, merely 10 minutes of charging will provide users with 20 hours of playback time!

VERDICT

The Oppo Enco M32 follows up the acclaimed Oppo Enco M31 and the difference between the two

earphones is stark. While the Oppo Enco M31 were provided audio bliss for beginner audiophiles and purists with their neutral sonic signature, the Oppo Enco M32 follow the more popular 'bass-first' philosophy with a V-shaped sound signature that will please bass lovers. The departure from the Oppo Enco M31's sound signature came as quite a surprise for us, but this was probably done to cater more to the masses' preferences. Essentially, Oppo has gone back to what's safe. We would recommend these earbuds to bass lovers and fitness enthusiasts.
