Elizabeth Holmes found guilty

The CEO and founder of health tech company Theranos was found guilty of investment fraud. <https://digit.in/jan22-70>

film that was reliant on special effects to tell much of its story, but also one that was not even nominated for an effects Oscar as the majority of them were invisible. However, it took many of the VFX techniques of the day to their absolute limits, such as combining matte paintings, miniatures and optical printing techniques in particular to produce Welles' final masterpiece. Once you add in unconventional lighting, strange camera angles, extremely long takes, non-linear storytelling, and the

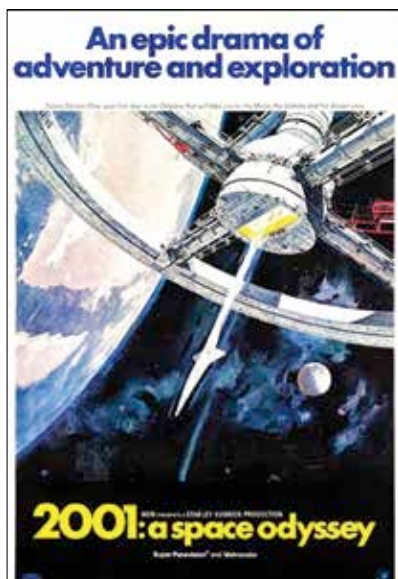

FACTOID

The first ever fully photo realistic character ever appeared in the 1985 Sherlock Holmes movie for 30 seconds which was a glass stained Knight and it reportedly took them 6 whole months to produce!

first appearance of many of the editing conventions that would become part of the filmmaking industry for decades to come, and you have the last great movie of the early days of film special effects, and undoubtedly one of the greatest all time.

ACTUALLY THE FUTURE

Yeah that previous title? Forget it, we're gonna time travel and see some spaceships now.

Up until the 1960s, every major stunt and effect that would require a huge amount of money was done in a miniature setting. However, it all changed when Hollywood got into an arms race of sorts amongst itself where the size and costs of sets was a thing to be boasted about in the film's marketing. This was an era of practical casts instead of doing it all miniature and saving millions of dollars by not crashing actual cars and planes for a film. Even huge films such as Fantastic Voyage(1966) used a huge set with an actual submarine for filming.

However, there was one single film that changed it all, it was 2001: A Space Odyssey which was based on a short story by Arthur C Clarke. The movie made Stanley Kubrick's career and effectively rewrote the future - certainly for a small group of effects technicians working on the film in England, one of whom, Douglas Trumble, went on to become one of the leading visionaries in late 20th-century effects work.

The 70's had way too much to cover so here's a brief: Star Wars, Spielberg, Boom Boom.

Basically, a lot of work was done on these movies being made by George Lucas who had built his own SFX studio in order to work on Star Wars and it even won an Oscar for the same. They showed the world what was possible without the help of Computer generated graphics and even when Lucas re-released Star Wars Episode IV: A New Hope in 1999 with CG supported special effects, it didn't make much of a difference

CGI

CGI was used for the first time ever in the making of the animated logo for Channel 4. And today, well, no movie is complete without it.

The logo originally showed four bars of the primary colours form the number four and then moved

around which again shifted into the main channel 4 logo.

However, in movies, we saw the perfect example in TRON and in that movie too, we only had 15 minutes of actual CG graphics. The reason? Well they didn't have computers powerful enough to actually process for that long and export the graphics so they had to outsource to Los Angeles which cost them a considerable amount of money. The 'Genesis Sequence' in Star Trek II: The Wrath of Khan (1982), however, beat it into the cinemas with a minute-long CG scene created by ILM that featured the first fractally-

generated landscape and particle system committed to film.

The funny thing however about all this is that neither won the Oscar for effects that year which instead went to E.T. The Extraterrestrial instead, which makes sense considering that the producers of the film set aside a whopping 2.5 million dollars just for special effects.

Then came out BladeRunner which showed how much CG actually had to go forward to match the accuracy of the models used in the movie whereas Return of The Jedi in 1983 broke the record for maximum number of effects shot at the time which came out to be 900 in it's duration of
