

iPhone 13 Pro 2G

For the Apple fans among us, the “good ol’ days” were probably around the time when the first iPhone (the iPhone 2G) was released and Steve Jobs was still at the helm of the tech giant. Well, you can still get your hands on a bit of history with Caviar’s latest iPhone 2G. Don’t let the name fool you though, this iPhone is the latest in the line of super-exclusive limited edition iPhone’s from the brand and what it is, is a iPhone 13 Pro / Max with a laser-etched signature of Steve jobs and an embedded fragment of the

motherboard of the iPhone 2G. Harking back to two tech legends, this 19 unit limited edition will set you back \$6990 at the bare minimum. The body is made from aviation-grade titanium and the back has a sealed capsule that houses a fragment from the original logic board of the original iPhone. The back panel also has a design that illustrates some of the technical elements of the device and are connected together. As usual, Caviar has taken the standard iPhone, which by itself is has an air of exclusivity about it (despite everyone having one) and taken it to the next level with the use of exotic materials and a bit of memorabilia to go with it.

Huawei Smart glasses

We have had smart devices in our homes, in our pockets, on our wrists and on our fingers as well. But now it’s time to get some on our faces as well. Huawei recently launched a range of smart eyewear and these work on Huawei’s proprietary OS called Harmony OS. The range comes in a plethora of styles to suit almost all faces thanks to detachable front frames. While not venturing into AR territory like Google Glass, these new glasses can remind the user of appointments, make calls, read out text messages, and also listen to music. It has touch-sensitive sensors on the stems that can be used to control various aspects of the device like accepting or rejecting calls, controlling the volume and changing or pausing music tracks. One of the most interesting aspects is the addition of posture detection where the glasses track the position of the head in relation to the spine and alert the user if it detects bad posture. And that is a feature that almost everyone needs these days. Currently, the glasses are only for sale in China and cost RBM 1699 which converts to approximately ₹20,000.

MV Agusta Superveloce Alpine

As if the bikes MV Agusta has on the market today weren’t drop dead gorgeous enough, they now have French automotive giant, Alpine (also a Formula 1 team) lending a hand. And if you know anything about MV Agusta, you already know how unmatched they are in terms of motorcycle design. Somehow they managed to improve on perfection with the MV Agusta Superveloce Alpine Limited Edition. When it comes to the price, the Alpine Limited Edition starts at a whopping €36,300 (approximately ₹31,27,000) and unsurprisingly, all 110 units were sold out within hours of the launch. In terms of the tech, this supersport bike boasts a sweet 3 cylinder 798 cc engine producing 147 HP at 13,000 RPM and has a max speed of 240 km/h. What draws you to MV Agusta is the sheer beauty of the thing and that is present in spades with this Limited Edition masterpiece. It features the signature Alpine blue livery and takes other design queues from the A110 sports car from the Alpine stables like the round headlight and taillight.
