

ELECTRIC VEHICLES WITH RIDICULOUS RANGES

5 Electric vehicles boasting the longest ranges on the market today or to look out for in the coming months!

Atreya Raghavan | feedback@digit.in

In the last year or so, the world has witnessed an unprecedented surge in the sale of electric vehicles. We have seen a 47% increase as of 2020, with 3.1 million units being sold globally, as per Bloomberg New Energy Finance's (BNEF) 'Zero-Emission Vehicles Factbook'. The report also stated that the surge continued well into 2021, where, in the first six months more than 2.5 million EV's were sold globally.

While on one hand the figures certainly reinforce the notion of EV's being the future, on the other hand, there is also an adoption resistance in many markets. A resistance to EV's that stem from concerns primarily over their range, as well as a lack of availability of roadside charging facilities, and concerns over the amount of time it takes to charge them.

Worry not, though! To help alleviate some of these fears, we decided to put together a list of EV's with ridiculously long ranges launching in

2022, and help you make an informed decision as a prospective buyer in the currently booming EV market.

MERCEDES BENZ EQS

The electric powered version of Mercedes Benz's S-Class flagship saloon, the EQS is one of the newest entrants

in the EV market. Powered by a 107.8 kWh battery pack, it can be charged at 200 kW at fast charging stations. 15 minutes of charging at one of these fast charging stations can provide the car with enough juice to run for up to 300 kilometers. And on a full charge the car has a range of upto 780 kilometers. Furthermore, the car features Mercedes' 'Navigation with Electric Intelligence' technology,

that can plan the fastest routes with an adequate amount of charging stations on the way to one's destination, factoring things like traffic, driving style, and so on. Rather surprisingly, to achieve a longer range, Mercedes Benz has in no way compromised on luxury, with the EQS featuring a 710-watt, 15 speaker Burmester 3D sound surround system, the 'Hey Mercedes' voice assistant, as well as the optional Executive Rear Seat package, which offers ventilated/heated seats with a massage function and electronic reclining.

TESLA MODEL S LONG RANGE

Equipped with a 100 kWh lithium ion battery, the Model S Long Range has an estimated

range of 651 kilometers. The amount of time taken to charge the vehicle varies with the kind of charger and power supply used. With Level 1 AC like the kind we see in a 110-120V outlet at home taking upto 20 hours, AC Level 2 with 220-240V chargers taking between 8 and 12 hours, and Level 3 DC Superchargers which are in excess of 480 volts taking a mere 20 minutes for an 80% charge. The
