It's been less than a year since I started reading Digit. I cannot explain how much it helps me keep up with the tech stuff going on around me with the busy schedule that I have working 9 to 5. Beyond that, the most impressive bit was how it started to influence the people around me, my mother who is a mathematics teacher in a government school one day received my digit parcel, she went ahead and opened it and to my surprise I found her sitting in the sun and reading it. She mentioned "Even though I'm very technically challenged, still this magazine is capable of keeping up my attention span and maintain the curiosity." Also she went ahead and said that it would be so cool to have her students read all this so that they

can move out of the basic subjects that they study and you never know they might find something that they would want to pursue in the future.

Thank you so much for making the content so accessible.

Regards,

— Arushi

1. Kindly start gift item with Subscription as earlier with the Subscription with little bit higher rate. *(means gift item available at discounted rate)*

2. Reduce gaming related contains... There are so many contains related to GAMING.

3. Start story/article related to Student's Subject like Android, ASP.NET, PHP, Python etc

(means study material, so every students awaited a copy of Digit)

These are the point from my side.

— Nirav Thakkar

Principal, Sarvjanik BCA & PGDCA College, Mehsana

The place where I come from is too remote to access the latest gadgets and other tech which is at disposal for others at the metro. The Digit magazine has made the latest technologies/gadgets their reviews available at my door step. I am an ardent subscriber of Digit for the past 2 years and digit has made me a TECH Nerd in my friend circle. Hopin' to live up to the tech revolution with Digit. Thank u digit. Stay amazing...

digit diary

If you are ever curious about what the **Digit gang is up to**, this is the place to get all the inside info. From the **latest game we're obsessing about** to the newest intern we're driving up the wall – it's all here folks.

Starting off this month's diary on a high note, Kshipra aka faafdaajalebi, who has been interning with us for quite a while now, was awarded by his university for fetching the highest marks in CSE for Semester 1 and 2. Congratulations! In Mithun's words, the first two sems of engineering are the hardest, so well done Kshipra.

With Omicron on the rise, we were once again in lockdown mode, and right after we were just getting accustomed to working from the office again. This time around, there was no escaping it, and we're pretty sure just about everyone caught Omicron at some point or the other. Fortunately, nobody had it too bad. Shrey, who also fell victim to Omicron recently, added, "I travelled to China in December 2019, when covid was spreading. Nothing. I travelled in the metro when Covid was spreading in India. Nada. It

took a trip to the sabziwala for me to finally catch it." We should point out that Shrey wasn't actively looking to catch the virus... we hope.

Yetnesh has had a busy month, testing 13 gaming laptops. He ran through 3.3TB of data testing the laptops. As it turns out, his "unlimited" internet plan defines unlimited as 3.3TB, which is why he ended up on a call with them about why his unlimited plan isn't actually unlimited.

Sameer, who recently became a father, has learned something interesting about his little one. She seems to be wirelessly connected to the Xbox Controller. Because whenever he turns it on, she wakes up from her nap. He's desperately

looking for a way to disconnect her from the controller.

Manish and Mithun on the other hand have been trying their hand at a local co-op game called Salt and Sanctuary, which can be described as 2D Dark Souls. It seems 2D or 3D, Souls-like games simply aren't for Mithun; it didn't take too many attempts for him to nearly throw the controller at the monitor. Ali, who's feeling a bit left out, desperately wants everyone to play co-op racing games with him (because he's no good at any other games) but he's set the bar pretty high and will only play proper sim racing games, while everyone else would rather play arcade racing games. 🏁
