WHAT'S NEW

Apple AR/VR headset

Apple has been long rumored to be working on some type of AR/VR headset, and now it seems like we might have gotten some more information about it. A report by MacRumors, states that notable Apple analyst Ming-Chi Kuo believes the headset will use the same 96W power adapter that is used by the MacBook Pro. On top of this, Kuo also noted that the headset will offer "Mac-level" computing power. He said that the device will pack two processors, one 5nm chip and another 4nm chip. Both of these will be manufactured by TSMC. Kuo also said that Apple's headset will be two to three years ahead of competing products in terms

of computing power. The headset is tipped to offer seamless switching between AR and VR modes. Back in

December, Kuo said that Apple could release the headset at the end of 2022. He added that the headset could operate without being paired with an iPhone and will support a wide range of different apps.

RBI reportedly sets-up department to regulate crypto issues

The Reserve Bank of India has reportedly set up a new fintech department to regulate crypto exchanges and more. According to reports, this information comes courtesy of an internal circular dated January 7, 2022. Operational since January 4, 2022, this new department will now be the point of contact in RBI for all fintech-related activities, including crypto-

related issues as well. In the future, this department is also expected to help create regulations for cryptocurrency and even its upcoming central bank digital currency (CBDC). The new

report is interesting as the RBI in the past has advocated for a complete ban on cryptocurrency in India. It had recently done so at RBI's 592nd central board of directors meeting held in Lucknow on December 17th, 2021. The central bank had previously banned crypto exchanges in India in 2020. That was later lifted by the Supreme Court.

NETFLIX

Netflix had its lowest year subscriber growth

2021 marks Netflix's lowest subscriber growth year since 2015. The numbers have seen about a 50 percent decrease in 2021 in comparison to 2020. The company projects to add just 2.5 million new subscribers in Q1 2022, down from 4 million last year.

Google

Google also entering the AR headset race

Reportedly, Google has established a brand new lab for the development of its upcoming AR/VR headset called Project Iris. The report also suggests that the first prototype AR/VR glasses/headset is almost ready.

Instagram now lets you remix any video

Instagram has released an update that will allow users to create TikTok-style collab remix videos using any video, and not just reels. You just need to choose 'remix this video' from the three-dot menu on any post to create your remix.
