Kaspersky predicts a rise in cyber espionage for India

According to global cybersecurity and digital privacy company, Kaspersky, India is one of the top 5 targeted countries for cyberattacks in the APAC region. This information comes from Kaspersky's 'Cyberthreats to Financial Organizations in 2022' report. The reason for increased cyber espionage in India is primarily the burgeoning use of digital technologies coupled with the lack of awareness regarding cyber security. Additionally, very limited resources are deployed towards the mitigation of these type of threats in the APAC region. Kaspersky predicts that APT (Advanced Persistent Threats) cyberattacks will rise in India and the intention behind these attacks is to collect sensitive geopolitical, business and military information. China, Singapore and Pakistan also make it to the top 5 list of countries that will see a rise in cyber espionage.

MOBILE WATCH

OnePlus Nord 2T

The OnePlus Nord 2T is all set to launch in India very soon. As per OnLeaks, the Nord 2T has a Full HD+ display and is powered by the Dimensity 1300 chipset. The Dimensity 1300 is yet to go official but going by MediaTek's track record you can expect a bump in performance over the 6nm Dimensity 1200. The display on the Nord 2 is seemingly carried over to the Nord 2T, going by the dimensions. However, one of the key highlights of the Nord 2T is its support for 80W fast charging out-of-the-box. The camera stack largely remains the same as the Nord 2 though we're expecting some sensor upgrades. The OnePlus Nord 2T is expected to have a triple camera array on the back headlined by a 50MP camera, an 8MP ultra-wide camera and a 2MP monochrome sensor. On the front, we get a 32MP selfie camera. The phone will likely run on OxygenOS 12 based on Android 12.

Realme 9 Pro and 9 Pro+ 5G

Realme shared the details of their upcoming Realme 9 Pro series which will be introduced globally. If speculations are to be believed, Realme 9 Pro 5G and Realme 9 Pro+ 5G will debut

sometime in February in India. A teaser released by the organisation also confirmed exactly which processor will be present under the hood. In an official press release by the Chi-

nese tech company, it was mentioned that the next-gen Realme 9 Pro series will be an all-5G product and 9 Pro+ will be the first smartphone to feature the MediaTek Dimensity 920 5G chipset. Realme 9 Pro will come with a 6.59-inch display with support for a 120Hz refresh rate and an in-display fingerprint sensor whereas the 9 Pro+ will come with a 6.43-inch Full HD+ AMOLED display with a 90Hz refresh rate. Both handsets will be equipped with a triple rear-camera setup and a 16MP selfie snapper. The higher-end Pro+ model is expected to come with a 50MP + 8MP + 2MP camera system, while the Pro variant is expected to come with a 64MP + 8MP + 2MP setup. The Realme 9 will pack a 5,000mAh battery, while the 9 Pro+ will reportedly come with a smaller 4,500mAh with 65W fast charging support. The Realme 9 Pro+ will be available in three different colour variants to choose from – Midnight Black, Sunrise Blue, and Aurora Green.

APP WATCH

Volume Booster: Sound Louder

This app works as both a volume booster and a music equaliser. The company also claims that it can boost the volume of your headphones and external speakers.

DINA: Personalized Weather

DINA reportedly provides personalised, hyperlocal weather reports. It even suggests the kind of clothes users should wear that will be suitable for current weather conditions.

Voiceliner

Voiceliner allows users to take down quick notes using their voice. You can also create hierarchies and rearrange notes within the app. The notes are auto-transcribed and searchable as well.
