

CES[®]

2022 ROUNDUP

CES (Consumer Electronics Show) is a consumer electronics industry technology conference held every year. The conference serves as the launch pad for over 20,000 new items. Despite the fact that the trade expo is not available to the public, several larger tech companies, such as Apple, Microsoft, Google, and Amazon have opted out in previous years, but participation continues to rise. It is a non-profit event, with all proceeds going to education, promotion of the electronics sector, technical standards creation, and lobbying.

Due to coronavirus, in-person events have been cancelled in the last two years. In 2022, in spite of omicron, CES was conducted offline. Many companies opted out of the offline conference, yet there was no lack of innovation in everything that was showcased.

THE VR SHOWDOWN

By Omang Baheti

Shiftall Inc.

Shiftall is a relatively new name in the VR space. It is a subsidiary of Panasonic based in Osaka, Japan. They have shown some of the coolest products in the VR space that are practical and *relatively* more affordable than their competition.

MeganeX

MeganeX is a small form-factor VR headset launching later this year. It sports a micro-OLED display in each eye, each with a 2560x2560 resolution. Its most significant strength is its lightweight and small

form-factor, allowed by Kopin's 1.3-inch displays and pancake optics. It does not need any base stations and uses cameras on the headset for inside-out tracking. The only current downside of this headset seems to be its limited

field of view. It is estimated to be released under a \$900 price tag.

MuTalk

MuTalk is a human muzzle, literally. It is a noise-suppression Bluetooth microphone in the form-factor of
