

GeForce RTX laptop GPUs

The RTX 3070 Ti and 3080 Ti, updated versions of mobile GPUs that have been seen in laptops since last year, were also announced. When it launches on February 1, the RTX 3080 Ti will be available in laptops starting at \$2,499 and more. It has 16GB of “fastest ever” GDDR6 RAM and can hit over 120 frames per second with graphics settings at 1440p resolution maxed out. Then there’s the RTX 3070 Ti Laptop GPU, which is a step down. Nvidia didn’t provide many hard numbers, but claimed that this processor gives up to 1.7x the performance of the previous

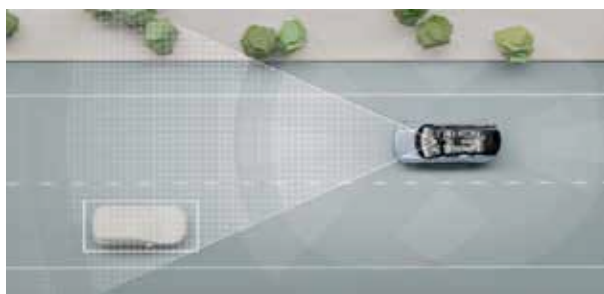

generation’s RTX 2070 laptops, with 100 frames per second at Ultra settings at 1440p resolution. When

they launch on February 1, RTX 3070 Ti laptops will start at \$1,499 and go up from there.

MORE MISCELLANEOUS COOL STUFF FROM CES 2022

By Satvik Pandey

Volvo Ride Pilot

Automotive technology innovations, especially the ones concerning self-driving techniques, have earned their place pretty high on the CES coverage pedestal for some years now. Walk around the floor for one round, and you are guaranteed to see multiple companies showing off their latest innovations in the field. At this year’s show, Volvo rolled out their take on the whole world of self-driving cars and automobiles when they revealed more specifics about the Volvo Ride Pilot and announced its planned US launch. They claimed that they are hopeful that this fully unsupervised Level 3 system will be approved for operation on public roads, but things did continue to remain quite uncertain as the company is still due to get done with the testing and verification process. The company did announce that they were very close to offering it as an add on subscription for their upcoming SUV, which is all set to launch later this year.

Jabra True Wireless Earphones

The pioneer in making truly wireless earphones, Jabra, at CES 2022, showcased the Jabra Elite 4 Active and updates for the Jabra Elite 7 earphones, along with their Jabra PanaCast 20 camera. The Jabra Elite 4 Active was touted to include features like Spotify Tap, Active Noise Cancellation (ANC), and Google Fast Pair, which would make them “one of the easiest headphones to connect to your Android device when switching on, without having to press a button.” On the other hand, the Jabra Elite 7 Pro and Active got a feature expansion with Bluetooth Multi-point, a technology allowing dual device connectivity, which was announced to be delivered in late January via the Sound+ app. In the imagery department, the much-awaited PanaCast camera got the awaited shipping announcement.
