

Nanotech Energy Batteries

Nanotech Energy came bearing loads of announcements to CES 2022. Conferred with the event's Innovation Award, the company's Graphene-Ogranolyte batteries are capable of being adapted and fitted into a lot of different form factors. The company announced that the pre-orders will soon start for its batteries, which are touted to be a much more efficient and safer alternative to the traditional lithium-ion batteries, performing at a much higher level than their older counterpart. These easy to manufacture and non-flammable batteries would be manufactured at the company's 517-acre production facility in Storey County, Nevada, at costs which will bring down their overall market retail price.

GRAID Tech: Supreme RAID

With storage solutions becoming faster by the day, GRAID Tech also put their cards down on the table, with Supreme RAID. This system will be capable of working through all the bottlenecks that the current solutions provide and make sure that the read and write capabilities of the storage devices being used are maintained. As stated on their product page, "A single SupremeRAID™ card is capable of delivering 16 million IOPS and 110 GB/s of throughput." The system will be shouldering all the input/output processing and the RAID computing burden, helping in increasing productivity and reducing running costs.

Arlo Smart Homes Security

Arlo Smart Home Security system, announced at CES 2022, bagged the Innovations Award. The keypad of the system is set to have a built-in motion sensor, and coupling it with All-In-One Sensors, would bring out a variety of access options to the place of installations, with these systems being capable of detecting door and window opening, water leaks and smokes, all this while being managed via the Arlo Secure App. The system is said to be capable of seamlessly operating with the other camera and

doorbell offerings from the company, bringing together an effective ecosystem of security Arlo Smart Home Security products.

L'Oreal Colorsonic

Bringing in one of the few fashion and personal needs announcements to the show, were the folks at L'Oreal, with their Colorsonic hair dye magic wand. With a big assortment of colours to choose from, the users of this product would be able to choose the colour of application, and be ready to colour their hair in just a matter of 5 minutes. Upon brushing along the scalp, Colorsonic would release dye that would be deposited straight down to the roots of the hair. The accompanying app will also enable the users to pre-test their choice of hair colour virtually within the app before applying it on their heads.
