Xiaomi 11i Hypercharge

120W fast charging, but do you need it?

The Xiaomi 11i Hypercharge is the first phone in India to offer support for 120W fast charging right out of the box and is only the second phone to be powered by the Dimensity 920 chipset. While it follows the Mi 10i series from last year, the 11i Hypercharge is actually based on the Redmi Note 11 Pro+ which launched in China in November 2021. Let's see how the phone fares in our review.

BUILD AND DESIGN

The Xiaomi 11i Hypercharge has a plastic build with an anti-glare matte finish on the back or a shiny gradient finish depending on the colour. The phone also has flat edges which aren't sharp and has a comfortable grip. We like the build, design and in-hand feel of the 11i Hypercharge.

The back panel has a large protruding camera module that houses three sensors along with an LED flash. The design of this module makes it wobbly when kept on a flat surface.

DISPLAY

The Xiaomi 11i Hypercharge features a 6.67-inch Full HD+ AMOLED display that offers up to a 120Hz refresh rate.

The display on the 11i Hypercharge is great for watching videos or movies and you can expect an immersive experience from the large and vibrant screen. Since the punch-hole notch cutout is very small, it does not spoil the viewing experience. The screen can get bright, even in sunlight.

PERFORMANCE

The 11i Hypercharge is powered by the MediaTek Dimensity 920 chipset which has an octa-core CPU and Mali-G68 GPU. This is paired with 6GB/8GB of LPDDR4x RAM and 128GB/256GB UFS 2.2 storage to choose from.

In our day-to-day use, the 11i Hypercharge showed no signs of slowdown or lags. The phone does come with some

pre-loaded apps including LinkedIn, but it largely remains clutter-free and is very snappy.

The 11i Hypercharge performed well in synthetic benchmarks. In AnTuTu, the 11i Hypercharge got a decent score. However, the OnePlus Nord 2 managed to get a lead of over 2 lac+ points. We saw a similar trend in the Geekbench single-core and multi-core tests. Next, we ran the PCMark workload test. In this test, the 11i Hypercharge managed to surpass both the Nord 2 and Vivo V23.

In 3DMark and GFX Bench GPU tests, the 11i Hypercharge got some of the lowest scores amongst the Nord 2, V23 and Galaxy M52, so this phone isn't meant for serious gamers.

CAMERA

The Xiaomi 11i Hypercharge comes with a triple camera setup on the back headlined by a 108MP camera followed by an 8MP ultra-wide camera and a 2MP macro camera.

Out of the three cameras, the main

108MP camera is capable of producing some decent pictures that are colour accurate and detailed. During the day and in ample lighting, you will be able to get some images with good dynamic range, textures and natural depth of field effect. The phone, however, fails to produce usable pictures at night or in low-lighting conditions. The ultra-wide camera produces average results with images having sharpness in the centre.

BATTERY AND CHARGING

The 11i Hypercharge's fame to claim its 4,500mAh battery that supports 120W fast charging and Xiaomi claims that it can fully charge in just 15 minutes. Now we did put that claim to test and surprisingly, the 11i Hypercharge did not live up to the hype. Right out of the box, the first time we charged the phone from 0-100 without enabling internet or logging into a Google account, it did take 15 minutes to fully charge.

However, our subsequent attempts took around 20 minutes on average. Xiaomi's claim only stands true in lab conditions with set parameters. As for battery life, you can expect a day's worth of use with medium activity.

VERDICT

The Xiaomi 11i Hyper is still the fastest charging phone you can get your hands on in India despite it not always meeting Xiaomi's claims. Apart from this, the display is good for daily use and it is paired with stereo speakers which can get quite loud. The build and design of this phone are good too and it feels comfortable and lightweight in the hand.
