Logitech G435

Stylish, lightweight, and comfortable

Ever since the Logitech G733 released in 2020, we've seen Logitech branching out with their gaming headsets. While they've still got the Logitech G Pro X which still very much looks and feels like a conventional gaming headset, with the G733, the G335, and now the G435, Logitech has gone for a more stylistic approach. With brighter colours and much lighter weight, these headsets are targeted at a more casual user base.

BUILD AND COMFORT

Like the G335 and the G733 before it, Logitech have gone for an all plastic build with the G435. Logitech has made it very clear that these headphones are targeted at younger gamers.

The standout feature of the Logitech G435 is it's incredibly lightweight. At just 165g, this is one of the lightest headsets we've ever reviewed. So, even after several hours of use at a stretch, these headphones do not feel taxing on your ears at all. Unlike the G733 and the G335, the G435 does not have a floating headband, it instead has a hollow plastic frame wrapped in fabric. While this would have been very uncomfortable with conventional gaming headsets which tend to be a lot heavier, with the G435, you will feel almost nothing. The mesh covered, memory foam ear cups exert just enough clamping force to keep the headset secure without feeling uncomfortable.

FEATURES

Using the headset wirelessly with a PC via the 2.4Ghz USB Dongle is simple; all you need to do is plug the dongle in and power the headset on. The Logitech G435 has only 4 buttons in total, including the power button, a mic mute button and the volume up and down buttons. However, using a combination of pressing and holding these buttons, you've got access to quite a few features. Unfortunately, these button combina-

tions are the only way to access these features as the G435 isn't supported by Logitech's G Hub software.

Coming to the button combinations, you can hold down the mic mute and power button for 3 seconds to initiate Bluetooth pairing. Just holding down the mic mute button for 3 seconds allows you to switch between Light-speed and Bluetooth connections. Double pressing the mute button enables mic monitoring. Pressing the mic mute and volume up button together increases mic monitoring levels, and the same with the volume down button instead decreases mic monitoring levels. Holding down the mic mute and volume down button limits the volume to 85dB, and the same with the volume up button instead, resets the limit to 100dB.

It should be noted that the Logitech G435 does not have any wired connectivity options.

PERFORMANCE

For a headset that Logitech wants you to wear everywhere, the Logitech G435 offers mediocre isolation. The headset

comes with 40mm drivers, is Discord certified, and is also compatible with Dolby Atmos, Tempest 3D AudioTech and Windows Sonic.

Coming to the sound profile, we've got a pretty accurate sounding headset with the G435. There's a slight boost on the high-bass and mids, while the sub-bass is actually toned down a bit. There's plenty of clarity when it comes to instruments, voices and other detailed sounds which aren't drowned out by louder sounds.

The Logitech G435 uses two embedded beamforming microphones, with the intention of simulating a boom microphone. While it certainly isn't nearly as good as a boom microphone, it is still pretty decent.

When it comes to battery, the Logitech G435 comes with an advertised battery life of 18 hours on a single charge. However, we found the G435 to last quite a bit longer than the advertised time. The device comes with a USB-C charging cable in the box.

VERDICT

Priced at ₹7490, the Logitech G435 is a solid wireless gaming headset, perfect for anyone who

wants to wear headphones all day without feeling taxed. We're a bit disappointed about the lack of G Hub support, but the headphones are pretty feature rich despite it. They also have an accurate sound profile.
