Vivo V23 Pro 5G

Strictly for selfie enthusiasts

The Vivo V23 Pro has officially launched in India alongside the Vivo V23. The new V23 Pro that brings solid upgrades to the V-series with the Dimensity 1200 chip, 90Hz refresh rate AMOLED display, 108MP main camera and 44W fast charging support. But what separates the V23 Pro from all the other phones is its back panel which changes colour on being exposed to sunlight or UV light.

BUILD AND DESIGN

The build and design of this phone are pretty solid. It's slim and lightweight, and fits comfortably in your hand. The back of the phone has a large camera module that houses three sensors along with a LED flash and has curved edges that seamlessly transitions into the curved display on the front.

The rear panel uses colour changing Fluorite AG glass which transforms from golden to shades of cyan in sunlight. Do note, however, that only the Sunshine Gold colour variant displays photochromic behaviour while the Stardust Black does not.

DISPLAY

The V23 Pro features a 6.56-inch Full HD+ AMOLED display that supports a 90Hz refresh rate. The display is curved around the edges.

The display has good brightness levels with decent sunlight legibility. The display looks really good save for the wide notch which is a side-effect of putting in two selfie cameras.

PERFORMANCE

The Vivo V23 Pro is powered by the MediaTek Dimensity 1200 chip with upto 12GB RAM and 256GB storage. It runs on Funtouch OS 12 which is based on Android 12 out-of-the-box.

In our tests, the V23 Pro raked in numbers similar to other Dimensity 1200 phones. The performance of the phone remained great in day-to-

day use and the Fun touch OS remained as snappy as ever.

In AnTuTu tests, the Vivo V23 Pro got marginally better scores over the Nord 2 and Reno 6 Pro which is good but in Geekbench tests, it performed poorly. In a test like PCMark Work, the Vivo V23 Pro aced the charts leaving behind Nord 2 and Reno 6 Pro in the dust.

For testing the GPU performance, we played some graphic intensive games like COD Mobile, BGMI, and PUBG New State. We used Gamebench metrics to record the gameplay sessions where the V23 Pro scored 60FPS at 100 percent stability on COD Mobile. Gamebench also recorded 40FPS at 100 percent stability on BGMI.

CAMERA

The Vivo V23 Pro has triple rear cameras headlined by a 108MP camera. On the front, we get two selfie cameras in the form of a main 50MP sensor followed by an 8MP ultra-wide camera.

The 108MP main camera creates 12MP pixel binned images that look sharp and colourful. The pictures have ample details but isn't able to replicate the textures as efficiently. The camera

also bumps up the saturation levels in different scenes and the HDR processing wasn't up to the mark sometimes. The night mode works well and Vivo has offered tons of new modes and filters for different photo styles.

Coming to the selfie camera, the V23 Pro has upped the game with a 50MP main selfie camera complementing it with an 8MP ultra-wide camera. The selfies are pretty decent and you won't be disappointed with its performance except when using it in a low-lit environment where it falls flat.

BATTERY

The Vivo V23 Pro comes with a 4,300mAh battery that supports 44W fast charging. Now the battery on this phone isn't extraordinary but we feel it's sufficient for most users who use their phones for

texts, calls, watching videos online, listening to music and more. The battery life

will take a hit if you play games for hours at a stretch, but otherwise, you can expect a day's worth of battery life.

VERDICT

So who should buy the Vivo V23 Pro? If you are someone who's looking for a new phone for under ₹40,000, the V23 Pro is the newest kid on the block with its colour-changing back panel and powerful Dimensity 1200 chip that performs efficiently in day-to-day use. The main camera can produce some good-looking images as well. The curved display looks and feels great in the hand. If your selfie game is strong, you'd absolutely love the dual selfie cameras of the V23 Pro.

—Siddharth Chauhan

SPECIFICATIONS

PROCESSOR: Mediatek Dimensity 1200 | RAM: 8 GB | STORAGE: 128 GB | DISPLAY SIZE: 6.56 inch | DISPLAY RESOLUTION: Full HD+ Display | REAR CAMERA: 108MP + 8MP + 2MP | FRONT CAMERA: 50MP + 8MP | BATTERY: 4300 mAh Lithium Battery
