Jabra Elite 7 Pro

Stunning microphone performance

Jabra has carved out a stellar reputation for its range of TWS earbuds. The company decided to overhaul its lineup of TWS earbuds with the launch of three new models. We are reviewing the Jabra Elite 7 Pro here. Jabra has positioned the Elite 7 Pro as the successor of the Jabra Elite 75t. Did these new earbuds meet our expectations? Let's find out.

BUILD AND COMFORT

With the Elite 7 Pro, Jabra has gone back to their tried-and-tested design formula of rounded earbuds – that they used and popularised in the Elite 75t and 65t lineup – over the semi-open oval-shaped design that the company adopted for the Elite 85t. This design creates a much more secure fit as compared to the Elite 85t but you may get the plugged-up ear feeling that some users may dislike. The earbuds have to be twisted and locked in place to create a snug, secure fit.

The earbuds have a matte-black finish that looks understated yet elegant. They are also rated IP57. On the charging case, you have the USB Type-C charging port and LED indicator light on the front and the Jabra logo on the top. The case also supports Qi-wireless charging as well.

PERFORMANCE

These earbuds come packing 6mm drivers, like the Elite 75t. Jabra has stated that the 6mm drivers used this time around are re-engineered. The Jabra Elite 7 Pro has a pleasant V-shaped sound signature with emphasised lows and highs. The mids are, surprisingly, accurately produced which results in detailed vocals and lead instruments reproduction. The lows have a nice weight to them without sounding boomy or muddy. These earbuds do sound much more controlled in the bass region in comparison to the Elite 75t. Vocals also sound engaging in the mix without being overshadowed by the

lows. The highs are also pretty decent, however, there's a prominent drop-off post 6kHz that robs some detail from cymbals and hi-hats.

Now, moving on to the microphone, this is one area Jabra earphones consistently blow us away. This time is no different. The Jabra Elite 7 Pro houses four microphones with a VPU (voice pick up) sensor in each bud. During our testing period, we were supremely impressed with the Jabra Elite 7 Pro's microphone quality. Be it calls or voice recordings, the speaker's voice sounds crystal clear with barely any distortion. Ambient sounds are also reduced drastically.

While the microphone impressed us, we were disappointed by the choppy wireless connectivity. In our testing period of two weeks, the earphones' wireless connection suffered from many lags and stutters and there was also the occasional connection drop altogether, which did get frustrating over time.

FEATURES

One of the most enticing features of the Jabra Elite 7 Pro is ANC. However, the Active Noise Cancellation isn't as effective as we expected. Not only do these buds struggle with cancelling out mid and high-end sounds, they also surpris-

ingly struggle with cancelling out all low-end sounds. The buds' saving grace on this front is excellent passive isolation facilitated by the snug seal provided by the earbuds.

Moving on to app support, Jabra's Sound+ app is extremely versatile. The app comes with a 5-band customisable EQ, ANC mode selection, customisable controls, and much much more.

As for other features, there's mono earbud use, voice assistant support, multipoint connectivity, and Qi wireless charging for the case.

BATTERY

The Jabra Elite 7 Pro comes with 8 hours worth of wireless playback time on the buds alone and 30 hours of total playback time with the charging case, according to Jabra. This number proved to be pretty accurate as per our tests as well. With ANC set to max, we got a little over 8 hours of playback time on the buds alone. The charging case was able to provide 2-3 additional charges as well.

The earphones also support fast charge as well, so plugging in the earbuds for 5 minutes will net you an hour's worth of listening time.

VERDICT

If you're looking for a premium pair of truly wireless earphones with excellent microphone performance and a warm-sound signature, the Jabra Elite 7 Pro is a compelling choice under 20K. Although the earbuds are priced at Rs 18,999, you can get these for as low as 13K during sales. At that price, the Elite 7 Pro becomes one of the best TWS we can recommend.

—Dhriti Datta

SPECIFICATIONS

SPEAKER SIZE: 6mm | FREQUENCY RESPONSE: 20Hz - 20000Hz | AUDIO CODECS: AAC, SBC | MICROPHONES: 4 microphones, VPU (bone conduction sensor) Jabra Algorithms | MICROPHONE TYPE: MEMS | MUSIC TIME TOTAL (EARBUDS AND CHARGING CASE): Up to 30 hours | CONNECTIVITY: Bluetooth 5.2 | IP RATING: IP57
