

two HDMI ports, two USB 2.0 ports, a Gigabit Ethernet port, two USB 3.0 ports, a 3.5 mm headphone jack, and both an SD and microSD card reader. The station can be plugged into your laptop, or even your smartphone with a Type-C cable, which both transmits data, and 65 W power which should more than suffice for most devices save for beefier laptops.

Like we mentioned in the intro, you don't have to go for this particular laptop dock, but you could definitely get one for the sake of convenience.

BACKBONE ONE GAMING CONTROLLER

If you're someone who plays games on a smartphone, then you're missing out by not getting your hands on a smartphone controller. With smartphones being as powerful as they are nowadays, you would be remiss not to at least try gaming out, most of it is free to try after all. Gaming on a smartphone can be pretty tedious, especially if you're someone with big hands, or when the smartphone screen becomes cluttered with buttons. The Backbone One features sticks that go on either side of your smartphone device, making it look almost like a Nintendo Switch. You've got two analog sticks, a D-pad, the four button array and dual left and right triggers, which is more buttons that you should need for smartphone gaming. Unfortunately, the Backbone One only works with iPhones, but don't worry Android users, we've got you covered.

RAZER KISHI CONTROLLER

That's where the Razer Kishi comes in, it's layout is identical to the Backbone One, and it's got a version for both Android and iOS. The Kishi comes with a foldable design, which

makes it more compact than the Backbone One, and like the One, it feels like a proper controller in your hands. We're on the brink of cloud gaming, and when you can finally stream AAA games on your smartphones, a smartphone controller will be invaluable.

READYDESK 2

This is a more unconventional accessory, but a useful one nonetheless, especially considering the prominence of WFH in today's day and age. The Readydesk 2 is an adjustable standing desk which attaches to any surface. It can support monitor's up to 27-inches wide, and features dual laptop stands, allowing you to use two screens at the same time. It's also fairly easy to adjust the height, and there's ample room below the rest of your required accessories.

ANKER NEBULA CAPSULE

Another unconventional accessory, which you may or may not ever need or even use, but it would be pretty handy to have if the situation ever arises. The Anker Nebula Capsule is a portable mini projector that you can easily slip into a bag, or even big pockets. It's wireless and comes with a built-in battery which lasts up to

four hours on a single use. It also features Dolby Digital sound support, Bluetooth support, and built in Wi-Fi, allowing you to wirelessly share your display in addition to just projection.

USB LAMP

For those of you who unfortunately do not have a backlit keyboard for your desktop or laptop, there's a very simple solution. A USB lamp! A simple device that plugs into a USB Type-A (or whatever type you prefer for that matter) port and lights up your keyboard. If not for late night typing sessions, they can be used with generic wall-chargers and double as night lights or general use lamps. Such a simple yet multi-utilitarian device. **d**
