

Apple Event in March or April

New iPhone SE and more likely to be announced at the Apple Event in March or April. <https://digit.in/feb22-01>

Tiangong space station

A robotic arm successfully grasped and manoeuvred a spacecraft on the Tiangong space station. <https://digit.in/feb22-02>

Best VFX in 21st Century Films

Cinema has come very far in the last few decades by integrating visual effects (VFX). While casual viewers understand that it is used to visualise an odd science fiction character here and there, there is a lot of depth to VFX and its influence in cinema. What was once reserved for fantastic science fiction films and big-budget action films is now present in your average Rom-com. Many films have used VFX, but here are some of the most creative uses of this power tool.

Priyanka Srinivas | feedback@digit.in

↑ The Lord of the Rings Franchise (2002-2004)

Sprinkled with VFX from almost 20 years ago, some of the effects in Lord of the Rings do look dated, such as large armies of people or making the hobbit characters tiny. However, most VFX in that movie stands strong to this date, especially Gandalf's fight with Balin. While the bridge itself does not hold up to current VFX, Balin's and Gandalf's movements along with their magical powers have created one of the best VFX fights in the history of cinema.

← The Curious Case of Benjamin Button (2008)

This is one of the best non-fantasy implementations of VFX where reverse-ageing was used to make Brad Pitt's character older than he actually was.

← Life of Pi (2012)

One of the protagonists in this film was a 450 pound tiger named King. Only 23 of the total shots had King in them. Everything else was a CGI, done to a high level of realism.

← Avatar (2009)

All of the sceneries in Avatar were hand-painted to give them a realistic feel. They paid careful attention to the lighting in spherical locations, recreating the perfect combination of VFX and reality.

← Gravity (2013)

The Gravity crew created the "lightbox," which contains 4000 LED bulbs, dedicated to simulating the sun's backdrop brightness and stars in space. The box measured 10 feet in height and width.

← Inception (2010)

"What happens when you mess with the physics of it all?" Cobb asks Ariadne. On cue, the streets rise up, the horizon diminishes, and an entire city splits and folds in half.

← War of the Planet of the Apes (2017)

In the trilogy's final two films, the CGI improved. The apes were photorealistic and exhibited so much emotion that you sympathised with their cause.
