

Mercedes-Benz Vision EQXX concept

While still a concept, this vehicle embodies what we have to look forward to in the near-future in terms of electric cars and how brilliant they can be. And it is because of that, it finds a place here. The Mercedes-Benz Vision EQXX, as a prototype, demonstrated what an intelligently designed electric car can do and the leaps it can make in terms of reducing the carbon footprint that vehicles cause. The headline news, that's hard to miss or ignore, is its range. Featuring a 1000 km range on a single charge, the EQXX is in a league of its own. Most of that massive range comes down to the way it is designed. With Mercedes' mastery over the black art of aerodynamics, the body work of the EQXX has a whopping and record breaking drag coefficient of just 0.17. Which basically means the car can cut through the air more easily making the air have less of an impact in terms of resistance. On the inside, Mercedes has furnished the interior with sustainable materials made from things like mushrooms, bamboo, cactus and vegan silk. The battery tech is also quite cutting edge. The 100kWh battery in the EQXX not only takes up 50 percent less space but also weighs 30 percent less than conventional batteries.

Huawei P50 Series

The flagship smartphone from Huawei had been something to look forward to. But in recent times, since the brand has been banned from doing business with American companies, the phone has gone into a sort of limbo, at least when it comes to markets out of China. The latest P50 smartphones have had a similar fate but they are still extremely desirable devices, despite the lack of Google services. Huawei recently launched their P50 series phones, namely the P50 Pro and the P50 Pocket in Europe and feature Huawei's in-house EMUI 12 skin that runs on open-source Android. The P50 Pro is a more traditional looking device and continues the legacy of having superb camera systems, featuring a 50MP wide, 64MP telephoto, 13MP ultrawide and 40MP monochrome lenses. It uses Qualcomm's Snapdragon 888 for processing and has 8GB of RAM and 256GB of storage. The P50 Pocket is more interesting though as it is a foldable featuring a 6.9-inch display when opened and has a small one-inch external display. In terms of processor, RAM and storage, the Pocket matches the P50 Pro.

Indian Scout Rogue 2022

One of the best selling bikes from the Indian Motorcycles stable, the Indian Scout has a new sibling in the form of the Rogue. Indian recently unveiled their 2022 Indian Scout Rogue to the world and this one has a sportier stance. Well, as sporty as an Indian Scout bike can get, really. I mean, have you seen the thing?

If La-Z-Boy Recliners were a bike, it would probably be one of the Scouts, with their quintessential low seat height and laid back

ergonomics. The new Indian Scout Rogue 2022 features a 1133cc V-twin liquid cooled engine that churns out 100 hp and is mated to a 6-speed transmission.

What makes the Rogue different from its Scout siblings is a higher handle bar and larger 19-inch aluminium front wheel. It also has different fairings on the front to improve riding comfort on motorways and the single seat is also different from the rest of the Scout range as well.

The Indian Scout Rogue 2022 will set you back a cool \$11,499 (approximately ₹8,59,000) at the bare minimum if you are looking to have a piece of the new Indian Scout Rogue 2022.
