

SOUND IN, NOISE OUT

All about Sony's latest and greatest noise-cancelling TWS

Dhriti Datta | dhriti@digit.in

The Sony WF-1000XM4 is the company's latest noise-cancelling TWS in the acclaimed WF-1000 series that is making waves across the globe. The earphones come with an improved design, an all-new processor, and other additional features that set it apart from its predecessor. We spoke to Mr Gyanendra Singh, Head of Audio Business at Sony India to learn more about this device and Sony's future plans.

Q Active Noise Cancellation is a huge trend in the personal audio space now. Being one of the audio manufacturers with some of the best ANC headphones on the market, what improvements in ANC can we expect from Sony? Will lower-priced variants also see the addition of this appealing feature?

Gyanendra Singh: Active Noise cancellation is one of the key features of the WF-1000XM4. The performance has been improved to suppress ultra-low frequencies like airplane noise to high frequencies like human voice by improving passive noise isolation and active noise cancellation. To enhance the listening experience, WF-1000XM4 has been further upgraded by three new factors such as a new integrated processor, newly developed 6mm driver unit and noise isolation earbud tips. We already have several products sub

Mr Gyanendra Singh, Head of Audio Business at Sony India

₹10,000 with Active Noise Cancellation such as WH-CH710N headphones and WF-1000XM3 in the truly wireless segment.

Q What other improvements has the newly - launched Sony WF-1000XM4 seen over its Predecessor? Especially when it comes to build quality, since it was a concern with the previous

generation model.

Gyanendra Singh: Compared to its predecessor the Sony WF-1000XM3, the new wireless earbuds WF-1000XM4 offers enough quality-of-life features to make them worth upgrading to. WF-1000XM4 comes with improved noise cancellation, much better call quality with a whole new technology. It is almost
