WHAT'S NEW

Crypto income to be taxed at 30 per cent

In her Budget 2022 statement, Finance Minister Nirmala Sitharaman recommended taxing earnings on the transfer of virtual assets at a flat rate of 30 per cent. She advocated that these gains be exempt from taxation. The government clarified that the loss from the sale of virtual assets can not be offset against any other revenue. Furthermore, the recipient would be taxed if they received crypto tokens or virtual assets as a gift. According to the Finance Minister, a 1 per cent TDS will be imposed on every payment made for a transfer that exceeds a certain monetary level. Clarity on cryptocurrency taxes has long been a key desire of stakeholders in the crypto business. Ahead of

the Budget, the majority of exchanges had asked for clarification on the taxation of revenue derived

from crypto-assets, as well as GST guidelines enforced on trading platforms to make operations easier for all parties involved. According to Anish Shah, of BDO India LLP, the introduction of taxes on the transfer of virtual digital assets is a positive development that would provide investors with upfront information on how their income will be taxed. <https://dgit.in/cryptotax>

Google Chrome OS Flex announced

Google, in their blog post, announced the new version of Chrome OS for older PC & Mac users. The new version is called Chrome OS Flex. The operating system is best designed for businesses and schools. The new version is free and very easy to install, as mentioned in the blog post. The new version is similar to the Google Chrome OS as they are created from the same base code and follows the same release

cadence. Chrome OS Flex carries some of the similar features as Chrome OS which includes background system updates, access to Web apps, and Android phone notification syncing. The new operating system boots up

quickly and also offers security with sandboxing and protection against viruses, ransomware, and phishing. With Chrome OS Flex, users will be able to access the official Chrome browser and Google Assistant. But they will not have access to the Google Play store. As long as you have a compatible Mac or PC, you can install the early version of the new Chrome OS Flex with a few quick steps using a USB drive.
