

SECURITY WATCH

Hackers targeting Microsoft Teams users

Since the pandemic began in 2020, Microsoft Teams has witnessed a massive surge in usage across the globe. However, due to its popularity, hackers are now using the platform to spread malware and malicious files. In a report by Avanan, a cybersecurity firm, users were warned about thousands of attacks being conducted via Teams since January. Since the platform allows users to send messages, files and make video calls, it is becoming increasingly prevalent for fraudsters to slip in malware or malicious files in the mix. There have been instances where unaware users download and open these files only to be infected by the malware. Avanan discovered thousands of attacks on Microsoft Teams where hackers send Trojan-infested documents and files via the chat section. An executable file dubbed 'User Centric.exe' is inserted into chats and when users install this file, the malicious code installs DLL files and create shortcut links to self-administer.

MOBILE WATCH

Xiaomi MIX Fold 2

We have a possible timeline about Xiaomi's next foldable smartphone, the MIX Fold 2. According to various news reports, the MIX Fold 2 might launch in the second quarter of this year. Looking at previous reports on Gizmochina, the upcoming second-generation MIX Fold smartphone will feature an 8.1-inch display with 2K resolution. It also mentions, both the inner and outer display panels on the device will support high refresh rates. Also, it has been claimed that Xiaomi will be using LTPO display panels on this flagship device. That means it could come with support for the adaptive refresh rate as well. This device will be most likely to come powered by the Qualcomm Snapdragon 8 Gen 1 processor. It is expected to have a higher capacity battery and support for fast charging along with wireless charging too.

MOBILE WATCH

Motorola "Frontier"

A recent leak brought to light high quality renders of the upcoming Motorola Frontier smartphone featuring a 194MP camera lens. Do keep in mind that no information suggests that "Frontier" is the official name of the upcoming

Motorola smartphone. A previous leak revealed little about the Frontier smartphone but the latest renders bring to light its entire design. After seeing the leaks for ourselves we can safely say that Frontier's design is not too dissimilar from other premium-budget smartphones on the market. In terms of design, the smartphone's front features a single punch hole camera at the top-middle of the screen, similar to Samsung smartphones. The 6.7-inch display is curved on the sides, similar to the one found in OnePlus 7 Pro. At the back, the Motorola Frontier smartphones feature a big 194MP main sensor and two additional lenses- a 50MP Samsung Ultrawide lens and a 12-MP Sony IMX663 telephoto lens. In terms of I/O, the Motorola Frontier smartphone comes with a USB Type-C port, a downwards firing speaker and a sim placement slot. Leaked reports suggest that the smartphone is powered by the Snapdragon 8 Gen 1 SoC, which also powers a lot of other flagship smartphones on the market.

APP WATCH

SmartRedial

The app allows you to redial a phone number constantly until the phone gets connected. This can get pretty annoying but you can change how many times you want to attempt to redial within the app.

Breathwrk

Breathwrk is a visually-soothing app with breathing exercises to calm your nerves. It also has optional voice cues and vibrations that you can toggle on if you wish to. You can also set up schedules.

HomeByMe

HomeByMe allows you to visualise your space and get inspiration to design it aesthetically. You can browse the app's feed to find an example that fits your style, and then duplicate elements of the room.
