BenQ MOBIUZ EX2710R Gaming Monitor

Gaming on a curve

Curved gaming monitors aren't new. We've seen 1800R and 2300R monitors in the market for a couple of years now. However, taking a flat panel technology and wrapping it around a curved chassis came with its own risks. Flat panels weren't meant to be wrapped, and the ones which can be wrapped aren't great for picture quality. You'd have to pay through the nose if you wanted to get a curved panel that checks all the boxes. Many brands have showcased rollable TVs such as the LG Rollable OLED TV R which costs approximately ₹74 lakhs. Needless to say, gamers usually don't have that amount of change lying about. So gamers have to do with the most affordable panel technology that can be curved to 1000R. That leaves just VA and QLED panels on the table and most 1000R monitors use VA in the affordable range. And that's what the EX2710R uses.

BUILD QUALITY

The BenQ MOBIUZ EX2710R is positioned as a gaming monitor and not an eSports monitor. The MOBIUZ EX2710R has a pretty heavy plastic frame which is held up by a rigid metal chassis on the inside. The bezels are very thin with the thickest part being the bottom chin.

The monitor has plenty of leeway in terms of adjustability. The height can be varied by 10 cms, the tilt by -5 to 15 degrees and the swivel is between -15 to 15 degrees. It even features the standard 10x10 cms VESA mount for folks who'd prefer to have their monitors hooked up with third-party stands.

The back panel is also curved with a speaker grille positioned in the centre. Underneath the grille, BenQ has 2x 2.5W tweeters and 1x 5W sub-woofer

Price
₹39,490

in a 2.1 configuration. The audio quality isn't anywhere close to a decent pair of gaming headphones but if you're up for some casual watching then they're more than sufficient.

Also on the back are four LED strips originating from the corners and stopping halfway before reaching the centre. The connectors are in their usual position. The BenQ EX2710R comes with two HDMI 2.0 ports, one DP 1.4 port and features a USB 3.0 Type B connector for enabling two USB 3.0 ports. There's also a 3.5 mm audio output in there.

The OSD settings can be configured using a joystick and a tactile button which are located on the underside to the right of the panel. Lastly, there's the stand which is mostly metal and features a small cutout in the centre for cable management.

PERFORMANCE

There isn't much information about the panel used in the BenQ EX2710R. Most BenQ monitors use AU Optronics panels since the two companies were spun off from Acer in the '80s. Moreover, when you consider 1000R

panels, there's just Samsung, China Star and AU Optronics that make them. So our bet is on AUO. The EX2710R has a VA panel backlit with WLED and can have up to 400 nits of brightness with HDR turned on. BenQ calls its HDR

technology as HDRi. HDRi has two modes, one being Game HDRi that renders a cooler HDR output compared to DisplayHDR. Then there's Cinema HDRi which is suggested for consuming movies.

The VA panel's colour accuracy is nothing to write about. The EX2710R isn't as bad as TN panels considering that the curvature improves the perceived colours.

Gaming at 165 Hz on a curved panel is pretty great. The 1000R panel certainly aids with immersion. We played DOOM Eternal on the panel with FreeSync turned on and the experience was pretty great. The curvature certainly helps with tracking more critters in your peripheral vision and HDR totally takes the gameplay to another level.

VERDICT

The BenQ EX2710R is a decent gaming monitor with a rather aggressive curve which works out well in games that have incorporated HDR. For the price, it's not that expensive either. However, if you're planning to use this monitor for media creation work, then we'd advise you to look for something that has better colour accuracy.

—Mithun Mohandas

SPECIFICATIONS

PANEL: VA | SCREEN SIZE: 27-inches | RESOLUTION: 2560 x 1440 | REFRESH RATE: 165 Hz | CONNECTORS: 2x HDMI 2.0, DP 1.4 | AUDIO PASSTHROUGH: Yes | CONTRAST RATIO: 3000:1 | RESPONSE TIME: 1ms (MPRT) | POWER: 35 W | WEIGHT: 7.1 kg.
