Redmi 43-Inches Smart TV X43

A good budget 4K HDR TV

Price
₹28,999

The Redmi Smart TV X43 is a 43-inch addition to the Redmi Smart TV X series. As of writing this review, the Redmi Smart TV X43 is priced at ₹28,999 and comes with all the features of its larger siblings including support for Dolby Vision and HDR. Is it a worthy consideration though?

BUILD	82

VALUE	83

content from OTT and your app library. It's an evolution of the Android TV UI to bring it more in line with the new Google TV UI. You also get PatchWall which has a better content-first approach and is the same that we saw on the Redmi 43-inch FHD TV.

BUILD AND DESIGN

The Redmi Smart TV X43 has relatively slim bezels considering the price point and the TV is held in place by 2 simple plastic feet. For connectivity, we have 3 HDMI ports, 2 USB ports, an optical port, a 3.5mm port, AV in and an ethernet port, along with an antenna port. There is also Bluetooth 5.0 and dual-band Wi-Fi, which is nice. The remote control lacks a dedicated mute button you get a dedicated button for Disney+ Hotstar and a dedicated button to pull up the app drawer.

UI

Xiaomi still offers the best of both worlds – PatchWall and Android TV. Android TV UI has seen some slight changes making it more in line with Google TV UI. It has a Discover Tab that shows a curation of content from OTT apps. The home screen offers a mix of

PERFORMANCE

The Redmi Smart TV X43 has D-LED backlighting. As far as peak brightness is concerned, in the Vivid preset, we recorded a peak brightness of 372 nits. Where the device impressed was with the Colorchecker Analysis, giving an average delta error of 2.9 which is quite good. Even in the grayscale 2pt, the error was below 2 indicating good performance overall. In the saturation sweeps, we have an average delta error of 2.5 which is very good, indicating a good representation of colours. So, while the brightness may be low for HDR content, it has fairly good colour reproduction.

Testing HDR content, we found out that in a show like Our Planet, we didn't get the specular highlights as we did on other TVs with higher peak brightness, but the dark areas of this show were still quite enjoyable. There are some occasions where the content on-screen looked slightly darker than was expected, but these moments were far and few.

Moving to SDR content, the TV does a good job of reproducing sequences and with a little bit of bias light in the room, there are almost no halo or blooming effects on the screen. The overall performance is very good for SDR.

AUDIO PERFORMANCE

Loud is the first thing that will come to mind when you hear the audio from this TV. It can get quite loud and fill a small room with ease. While there are a bunch of audio presets to choose from, We found leaving the TV on Standard or Movie based on the content gave the best results. The audio does lose clarity at high volumes and we found that going beyond 20-25 was just too shrill especially for movies. Below 25, the volume is clear and audible with clear dialogue in TV shows. But to enjoy a good movie, you'll have to invest in a soundbar.

VERDICT

What the Redmi Smart TV X43 has going for it are the same features that made its larger siblings an enticing offering. The TV is packed with features including support for almost all HDR formats, a host of connectivity options and a simple design. Its build is at par with other budget TVs we've tested. The panel of the TV has very good colour reproduction for HDR and SDR but the peak brightness is lower than what we'd like for an immersive HDR experience. Considering the 29K price point this is a good option for those looking for a budget 4K 43-inch TV.
