**THE GREAT RESIGNATION**

The Great Resignation is a theory that predicts a big number of individuals will resign from their jobs once the COVID pandemic has passed and society returns to "normal." Managers are currently handling the pandemic's ripple effects as employees re-evaluate their careers and quit in big numbers. Companies in the United States and India have a record number of available positions for junior to senior levels of experience. The technology and healthcare industries have the highest resigning rates. At the start of the pandemic in 2020, the work market was full of uncertainty and mass layoffs. Millions of people lost their jobs, and those who were fortunate enough to stay employed stayed in their roles for the sake of survival. However, after experiencing a better quality of life working from home, people have realised workplace

toxicity. Workers in privileged positions who do not live paycheck to paycheck are finally moving on to better job conditions with favourable pay. Most people in developing countries, who lack social security and unemployment benefits, cannot afford this luxury. However, this is bringing an exponential increase in the "brain drain rate" of these countries, as people are rushing to immigrate to places with better worker compensation. Employees finally resigning in protest to be treated humanely? Extremely Hot.

**ANTIWORK CONTROVERSY**

r/antiwork is a subreddit that has gained massive popularity in the midst of the pandemic. As more people have realised the value of their labour, they have found a safe place in antiwork: a social space to protect workers rights and demand better working conditions and equivalent pay. However, the subreddit has recently fallen into turmoil as a result of a Fox News interview in which one of the subreddit's moderators, Doreen

Ford, did an interview that was generally perceived as a PR catastrophe. Ford appeared frazzled and unprepared for the media limelight when speaking to Fox News host Jesse Watters. She mirrored bad preconceptions of both antiwork manifestos and its Reddit moderators. Ford, who defined laziness as a "virtue," kept the talk focused on her own life, which consisted of a 20-hour week as a dog walker and a hazy goal of becoming a philosophy teacher. Overall, this did a lot of damage to spread misconceptions about people who support the antiwork movement. Once considered a force of power that unionised to protect labourers, the social cause was villainised on national television. People in support are now considered to be lazy freeloaders who want to uphold their high standard of living without working for it. However, this is definitely not the case, and the defamation of this movement due to the antics of one person is a Not.

**4-DAY WORK WEEK**

Four days at the office, three days with friends and family. And it's all for the same salary. Who wouldn't want a piece of that? Most employees, without a doubt, would leap at the chance. Employees in Belgium will now have the option of working a four-day week. For those who desire it, Belgium will now implement four-day work weeks. Employees, on the other hand, will not be working any less. If they wish to, they can simply compress their hours into fewer days. They will have the freedom to choose whether to work four or five days per week. Employees in India may be able to enjoy a four-day work-week later in 2022 if the new labour regulations are enacted, as opposed to the present five-day workweek. However, the policy remains the same as Belgium, where the work hours are compressed in lesser days. There are definitely better ways to implement this. Between 2015 and 2019, Iceland experimented with a similar
