

Medicare on home COVID test

Medicare to start covering the cost of at-home Covid tests in the US. Here's hoping India follows suit. <https://digit.in/mar22-37>

Nokia G21 launched

The Nokia G21 has launched and its star feature is being able to last 3 days between charges. <https://digit.in/mar22-38>

concept. It did, however, cut the working week from 40 to 35 or 36 hours while keeping wage levels the same. The test phase drew well around 2,500 participants. The well-being of participants had increased dramatically, working procedures had been adjusted, and colleagues had collaborated more closely, according to a study by the Icelandic non-profit Alda (Association for Democracy and Sustainability). Productivity either remained constant or increased. Following the trial period, trade unions and groups won permanent work-hour reductions. 86 per cent of workers now have the option of working a four-day week. Iceland's cold, but the 4-day workweek is Hot.

METAMATES

News regarding the Metaverse gets more bizarre as time passes by. In a new vision released by Meta CEO Mark Zuckerberg, he mentioned casually that the staff at Meta will now be called 'metamates'. In his conclusion, Zuckerberg suggested the employee vision: Meta, Metamates, Me. The reference is associated with the navy, according to Meta executive Andrew Bosworth on Twitter. "It's about our shared feeling of responsibility for our collective achievement and for each other as colleagues," wrote Zuckerberg. Hey, we are not suggesting that correlation equals causation, but Meta did experience a 26 per cent market crash around the same time this manifesto popped out. Coincidence? Maybe. Either way, it is rather clear that the world is moving away from Facebook/Meta, which is where the whole transition and rebrand comes from. However, Meta is already losing public favour, and the transition to Metaverse will take a long time to come into effect. This change is not going to garner any favours for Zuckerberg or his employees. If anything, the term 'metamates' makes the whole operation sound more cult-like than ever. We do Not appreciate cults around here.

CRYPTO TAX

In India, cryptocurrency investors have been waiting with bated breath for information on how the government plans to tax digital assets. From April 1, India will tax all "virtual digital assets" at 30 per cent, according to Finance Minister Nirmala Sitharaman's Budget 2022. The 1 per cent TDS that applies to every single bitcoin transaction is definitely an issue, as forecasted by different analysts. For starters, high tax rates will deter new and current investors. In addition, the IT department's compliance needs to be properly specified, particularly when it comes to TDS. There are numerous gaps in the definition of VDAs under this new policy. Despite the fact that cryptocurrencies are classified as assets in the budget, they are treated differently from conventional assets. Many scenarios surrounding crypto such as staking, forking, receiving them as a salary, spending crypto to acquire goods and services, and P2P agreements are unaccounted for, in terms of taxation. For something that is supposed to be decentralised, heavy government taxation is definitely frowned upon. Most traders and investors are now considering cryptocurrency to be a riskier asset, while others are withdrawing from the market completely. Such a heavy tax may force the industry to leave the country entirely. While we understand that the government needs better income, taxing cryptocurrency and other virtual assets like NFTs is Not the way.

ZOMATO CREDIT CARD

Zomato has been cutting down on their discount coupons and pro membership features, and people are generally a little disappointed. However, these new changes are to accommodate a new product in partnership with RBL Bank: the Zomato credit card, also known as Edition Classic Card. In almost all ways, this card is better than all the existing offers provided by the delivery service. You can apply

for it through the Zomato app on the 'money' tab. There is a ₹500 joining fee and a ₹500 renewal fee. The good part is, whatever you pay in terms of fees gets credited into your account as Edition Cash, which works like real money on the Zomato app. Basically, 1 Edition Cash equals 1 INR on the app. In just a few taps, you can see a transaction-by-transaction log of the incentives you've earned on the app. As soon as you complete the transaction, the cashback percentage and amount are immediately reflected. This is a fantastic feature, a first in the industry to use such a transparent approach. A Zomato pro membership comes along with this excellent deal. For all the self-proclaimed mega-foodies, this card will help you get hefty cashbacks on online and offline purchases via the app. As discount-lovers, we find the Zomato credit card extremely Hot.

ZERO-CLICK HACKS

A "zero-click" attack allows a hacker to gain access to a phone or computer without the user clicking on a suspicious link or attachment. Instead, hackers use a succession of security holes in operating systems like iOS or Android to break into a smartphone without having to trick their victim into doing anything. They can install malware capable of stealing data, listening in on calls, and tracking the user's whereabouts once they've gained access. People are more informed about malicious links than ever. Hence, zero-click hacks are being used more frequently by government agencies to spy on activists, journalists, and others, according to many surveillance company employees, security researchers, and hackers. There aren't many ways to insulate yourself from a zero-click attack. Updating your phone to the latest OS version is one way to help. But overall, losing the security around your digital data through no fault of your own is terrifying. We would Not want to be in that situation. ❌
