CAN RAW BEASTLY POWER & PRECISION SCIENCE COEXIST?

This is an all-new quarter-litre beast, with a new motor that's been developed to deliver effortless power across almost the entire rev-range. Right from the materials used, the fit of the panels, the ride ergonomics, this a motorcycle with 'legit creds' as a flickable, point and shoot, high-revv-happy motorcycle! Oh and not to forget the badge of honour - the analogue tachometer, more about it later.

BADGE OF THRILL -
AN ANALOGUE
TACHOMETER NEEDLE

Mechanicals and electronics married together by the powers vested in software is indeed a match engineered in heaven.

- Electronically controlled fueling, check.
- Software analysed air-fuel-mixture, perfect lift on the cam-lobes, precision articulated valves, check.
- All of these working in harmonious tandem allowing the engine to breathe freely at every rev-range, check.
- Result - one torque-y machine, check.
- All this for staying true to the Pulsar DNA (Read wheelies at will, off-the-block surge of power and effortless overtakes, all on demand!)

The all new assist and slipper clutch, not only ensures the smoothest gearshifts, but also guarantees that this bad boy is well behaved-on aggressive down-shifts and while deploying engine braking.

It stays planted thanks to the upgraded precision handling equipment - the revised front forks, the sharp rear mono-shock. The latest tech in ABS brakes from Grimeca paired with ventilated discs. The lighter 10-spoke forged alloy wheels, donning grippy-rubber from MRF.

The 'face of the motorcycle' boasts of a bi-functional LED headlight. And your cockpit is purposefully designed, the digital part displays the vitals of your motorcycle, be it the gear you are in, fuel efficiency & range, or the speed with which you are flying through time and space. But the rev-dial... that is analogue with the red-needle and all! It still holds a place of pride as a genuine "Badge of Thrill" on the dashboard. Legend has it that it does not measure the engine's RPM, but the Pulsar-Maniac's pulse rate!

VERDICT

It sure makes it to the list of "Top-10-Must-Have-Personality-Extensions" for 2022. And if we must, the red one looks **smokin' hot!** This is sure to trend for a long time, if the success at launch is anything to go by, especially in the coming months - **#HotBikeSummerOf2022**
