

III) BMW 750iL:

You think Tesla, with its Summon autonomous parking feature, is cool? While the Tesla can boast autonomous driving and self parking, it has nothing on the BMW 750iL Bond car which the Quartermaster at MI6, or 'Q', as he is popularly known, crafted back in 1997? You all probably remember Tomorrow Never Dies and the famous high speed chase in the multi-storey parking lot of the Atlantic Hotel parking garage in Germany, where Bond escaped in the car controlling it via the trackpad on his Ericsson cell phone sitting in the backseat? No? If not, we HIGHLY recommend you watch it right away!

Bond's E38 BMW 750iL, could be controlled via his Ericsson cellphone,

movie had a cloaking device that could render it completely invisible to the naked eye. Furthermore, it was also equipped with two shotguns, two machine guns, and four missile launchers that would come out from the hood, the roof, and the grille of the car respectively. Bond could be seen using the car to its fullest potential in a high-speed chase sequence in Iceland, with a similarly equipped Jaguar XKR driven by Tang Lin Zao, a North Korean covert operative and the right-hand man

V) ASTON MARTIN DB10:

The Aston Martin DB10 was developed by the British Secret Service, or MI6's Q Branch. It was a £3 million prototype vehicle which was originally assigned to 007, but then re-assigned to 009 following the former carrying out an unsanctioned mission in Mexico. The car, although not loaded with ammunition when Bond stole it to travel to Rome to further investigate shadow organisation Spectre, featured a rear machine gun as well as dual concealed flamethrowers in its exhaust tips. It was further revealed that the car also featured an ejectable driver seat with an in-built parachute which Bond used after blasting the Jaguar being driven by Mr. Hinx, an assassin pursuing the former, using the flamethrower.

It is also extremely rare with only ten examples of the car being built by Aston Martin to commemorate 50

which when flipped open, had an LCD screen with a trackpad to control the car, as well as controls for a roof mounted rocket launcher, automatically reinflating tires for those nasty spijketrips, a cable cutting device as well as caltrops, which could be used to immobilise those vehicles chasing Bond. The vehicle also featured a security system to prevent intruders, which could release tear gas as well as electrocute them. Needless to say, Bond's antics with this car were not appreciated by Q.

IV) ASTON MARTIN VANQUISH:

Ah, the Vanquish. Or as Q said in Die Another Day- "They called it the Vanquish, I call it the Vanish." As you've probably already guessed, the Vanquish that Bond drove in the

of diamond magnate Gustav Graves, albeit lacking the cloaking device. The Vanquish was powered by a 6.0 litre V12 engine, mated to a 6-speed paddle transmission, capable of putting out 460 horsepower and 542 Nm of torque. It could accelerate from 0 - 100 km/h in 4.5 seconds. Oh and, did we mention the part where the ejector seat feature of the car could be used to flip the car the right way up if it was flipped over? Seems Q knows Bond far too well, and included that feature for an eventuality just like this!

years of their partnership with the 007 franchise, making it one of the most elusive automobiles ever. **d**
