Note: The device used to explore the features was an iPhone 12 mini running on iOS 15.3.1, and had both the apps updated to their latest public versions.

TELEGRAM

One of the most popular 'secure' messaging services across the globe at the moment, with a constantly evolving user base, Telegram

has seen a rise in the world of messaging apps that only a few have been able to exceed or match. All of it is for a good reason, though. With one of the best security measures in place across the board and a host of different features available, Telegram is potentially the app that could fit anyone. It also enhances the user experience of both advanced and novice users.

With the growing user base, the application's developers have added a host of new features over

the years, some of which, despite being extremely useful, have not caught the eye of the typical user. Here's a collection of some of those features which might actually come in handy for you!

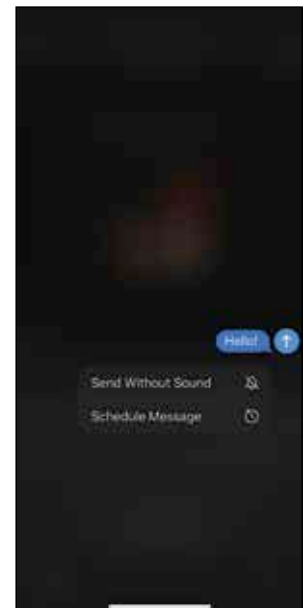

SEND THEM MESSAGES SILENTLY

Sometimes, if you need to send a message to someone who is in the middle of an engagement, you may refrain from it since their phone may not be on silent

and that could disturb them. The developers at Telegram must have gone through countless such encounters, which would have made them bake in the beautiful feature of sending silent messages. Yes, you read it correctly. You can control whether your message sent to an individual makes their phone play the notification bell or not.

It is relatively simple to do so too. After you have composed your message and are ready to hit the send button, hold it for a couple of seconds instead of tapping the send button right away. When you do so, a sub-menu will open with the option to send the message without sound. Just click on it, and you are set. The message would reach the receiver's inbox without any sound and would stay there waiting to be opened. In

Shhhhh...
