

verified bots have a blue tick against their name, helping you weed out the bad ones. With others, you will have to double-check to see if you are using the right one. Once you have selected the bot of your choice, just click on its name from the list. After clicking, you are redirected to the bot's access chat space, after which bot specific instructions will be presented to you. Follow them, and you will have access to that bot. Please note that most bots are safe, especially the verified ones, so it is safe to give them most of the permissions that they demand, but always be careful when dealing with bots and permissions because you never know which click will be just enough to compromise your data and privacy.

### USE PROXIES

While for the most part, Telegram in its basic form provides enough level of privacy for most users. To get an added layer of protection against potential privacy-compromising threats, you can use your own custom proxy settings when using Telegram. There are a host of services to choose from, and if you are an advanced enough user, you can have your own. The choice is yours.

To get set up a proxy, go to the settings menu and click on the Data and Storage menu option. Scroll to the bottom of the page that opens, and there you will find the Proxy option under the Connection Type, menu category. On the page that opens, locate the add proxy button, click on it, and enter the details as requested. After saving the details, navigate back to the

Be careful while using proxies as they might lead to some loss of in-app network performance

previous page. Then toggle on the Use proxy button, and your proxy will be enabled. You can also use the proxy for calls, and the option to enable it will be present on the same page.

## WHATSAPP

WhatsApp needs no introduction. A service with a userbase as large as some countries on this planet, WhatsApp is the go-to messenger app for a lot of users across the globe. Being one of the firsts to see the explosion in terms of the userbase, WhatsApp, which is owned and run by Meta, has been through a lot of ups and downs, which have often brought the app and its owners' integrity into question. But it continues to stand strong, as being one of the market leaders, and the one that most of us turn to, because of its design and adaptation by the users on a large scale.

There is almost no feature that hasn't been talked about, be it new or old. But here, we have a list of a few

features and tweaks which might help you make your experience of using the app even better than what you have right now, with all the customisations and preferences in place.

### CHECK MESSAGE STATS

This feature is only available to people with a WhatsApp Business account and app. So, you might want to skip to the other feature. For the ones using the Business version of the application, WhatsApp allows users to check the statistics of the messages that they send. Today's world, especially the part which exists on the internet, is built around this mystical thing that we know as statistics. And, for a business runner, what would be better than to be able to see in the form of numbers how their broadcast messages are performing.

So, to check the message statistics, all you will need to do is head over to the More options button, represented by three dots on the top right corner of the app screen. From there, go to the Business tools button,

and click on it. Again, locate the More options button and click on it. In the menu that opens, click on the Statistics option and voila! You will have at your disposal all the stats and figures that you could ask for.

### KNOW THE REGULAR CHATTERS

Staying on the course of numbers, the regular users can get statistics from inside the WhatsApp messenger app, which can help them identify the person that they interact the most with on the platform by sending the data in one or the other form. Who knows, you might want to throw a party someday for the ten people you interact the most with on the platform? Instead of eyeballing the figure and playing the game of probability, you can have at your disposal a concrete list of these accounts at your disposal.

To get the information about the most interacted with accounts on WhatsApp, head over to the Settings page. There, click on the Storage and Data button. Inside the menu, click on

It is better to be safe than sorry with audio messages
