Xiaomi Redmi Note 11 Pro+ 5G

Keep your expectations in check!

The Redmi Note 11 Pro+ is a mid-range phone that brings a great set of features with a sweet value for money proposition. In this review, we'll try to find whether the Redmi Note 11 Pro+ manages to one-up its predecessor?

BUILD AND DISPLAY

The Redmi Note 11 Pro+ is a well-built phone and feels comfortable in hand. This time around Redmi has brought a flat-edge design language along with a frosted matte finish on the. The camera module is slightly raised which means it wobbles when kept on a flat surface. Other than that, it looks great in the three available colourways.

The display is decent for watching videos and movies but unlike the Note 10 Pro Max, it is incapable of HDR playback. It is large and has the same size as the Note 10 Pro Max.

We used Calman Ultimate pairing it with a colourimeter to gauge the display performance of the Note 11 Pro+. In the sRGB colour space, the display has an average deltaE of 2.6 with 432.8 nits of typical brightness while in the DCI-P3 colour space it rises to 609 nits.

PERFORMANCE

The Redmi Note 11 Pro+ offers a balanced performance in day-to-day use and generally, we did not face any lag while performing basic tasks. However, unlike the Redmi Note 10 Pro Max which was also adept at handling heavy-duty tasks and sustained gaming performance, the Note 11 Pro+ isn't able to provide the same kind of experience which is a bummer.

We tested the Redmi Note 11 Pro+ taking it through our set of synthetic benchmarks and found that it demonstrates good CPU and GPU performance but it's nothing extraordinary like we've come to expect from a Redmi

Note smartphone. It is able to run COD Mobile

at 49 FPS with 97 percent stability (High graphics, Max frame rate) but when you increase the frame rate to Max, the chipset isn't able to render 60 FPS and we encountered a lot of lags and frame drops.

BATTERY LIFE

Xiaomi has upgraded the fast charging standard bringing 67W speed to its latest Redmi Note phone. The battery capacity is rated at 5,000mAh and is quite efficient in daily use. On a good day with 120Hz refresh rate enabled, brightness tuned to maximum and WiFi+cellular connectivity, the Redmi Note 11 Pro+ got us over 8 hours of screen time.

CAMERAS

The cameras on the Redmi Note 11 Pro+ are great for your casual photography needs. In daylight, the main camera produces detailed pictures with good colour reproduction across the board. It lends a shallow depth of field to pictures which looks great when taking close-ups. The night mode helps negate the noise and controls shadows as well as the highlights giving you a usable low-light picture.

The ultra-wide camera makes for some good wide-angle pictures in daylight and works just fine. While there

is no noticeable barrel distortion, there's not much detail in the shots.

The macro camera is downgraded to a 2MP sensor from a 5MP on the Note 10 Pro Max. Still, it helps you take extreme close up shots that are well detailed in daylight.

Another thing that bugged us was that unlike the Note 10 Pro Max, the Redmi Note 11 Pro+ doesn't have the capability to record 4K videos.

VERDICT

The Redmi Note 11 Pro+ isn't as value-for-money a phone as the phone it's replacing, the Redmi Note 10 Pro Max. It checks some boxes but overall we expected it to be a refinement over one of the best-selling mid-range phones. Instead, the Redmi Note 11 Pro+ is an iterative update at best and doesn't justify its asking price.

The phone looks good and has a flat-edge design. The display remains an essential part but it can't offer HDR playback which is something you cannot skip when spending upwards of 20K. The performance of the Note 11 Pro+ is good but nothing to write home about. The cameras will give you Instagram-worthy pictures if you put in some effort and patience but there's no way for you to record a 1080p video at 60FPS. The battery life of this phone is great and is most certainly a welcome upgrade, but otherwise, the Note 11 Pro+ remains a weak upgrade over a great mid-range smartphone.
