Samsung Galaxy S22+ The Goldilocks Samsung flagship of 2022

The Samsung Galaxy S22 lineup has finally launched to much fanfare. And the device we have for review here is the middle child – the Galaxy S22+. It is worth considering over admist tough competition? Let's find out.

BUILD AND DESIGN

Compared to last year's S21+, the new Galaxy S22+ has gotten a bit shorter, slightly thinner and lighter. With the S22+, Samsung makes some minor design refinements over the S21+. It retains the chic Contour Cut design for the camera module, which looks classy.

On the front, slim bezels outline the flat display. The aluminium frame is still slightly curved, unlike the flat iPhone side frame. The back has a silky matte texture and is resistant to finger-prints. Corning Gorilla Glass Victus+ protects both the front and back. The phone houses an ultrasonic in-display fingerprint sensor that is adequately snappy and accurate as well.

DISPLAY

Like its predecessor, the Galaxy S22+ has a flat, 6.6-inch display Dynamic AMOLED 2x display with FHD+ resolution. The device comes with a variable refresh rate from 48Hz - 120Hz. With a resolution of 1080 x 2340, the S22+ isn't offering anything path-breaking but the display still looks gorgeous with excellent visibility even in harsh sunlight. We measured 860 nits of peak brightness on the S22+ which is plenty bright both indoors and outdoors. The device supports HDR10, HDR10+ and HLG but is missing Dolby Vision.

PERFORMANCE

The Samsung Galaxy S22+ is powered by the Qualcomm Snapdragon 8 Gen 1 SoC in India that runs on a 4nm process. Although the chip is powerful, it only offers a marginal performance

bump over last year's Snapdragon 888. The chipset is coupled with 8GB RAM and up to 256GB UFS 3.1 storage.

To gauge the performance, we ran our usual slew of benchmarks to see where the S22+ stands where it did decently well, but it was bested by the iPhone 13 Pro and Motorola Edge 30 in some tests.

We played titles such as Asphalt 9 Legends and Call of Duty: Mobile without a hitch, for the most part. The phone, however, only gave us 30 fps on Asphalt 9 at 94% stability while the iPhone 13 and Moto Edge 30 Pro both gave us 60 fps.

Regardless of the benchmark scores and throttling issues, the general day-to-day performance of the Samsung Galaxy S22+ is impressive. There are generally no lags or stutters in the animations and multitasking is a breeze even with only 8GB RAM.

CAMERA

The Samsung Galaxy S22+ is a true upgrade over its predecessor when it comes to cameras. Samsung has

improved the cameras across the board. The main sensor is larger this year, so it can let in more light than last year's model. The primary sensor is capable of bright, detailed photos in daylight with punchy, saturated colours that Samsung phones are known for. The camera has excellent dynamic range as well. Low light images come out good, there's some loss in sharpness but the noise levels are pretty low. With night mode active, the images get a boost in detail and even in severely underlit conditions you can get a perfectly usable shot.

BATTERY LIFE

Due to battery efficiency improvements of the new internals, the S22+ does do slightly better than the S21+ in terms of battery life. During our testing, the phone lasted a day and a half on one charge and the day consisted of heavy benchmarking, shooting photos and videos and playing games. As for charging, the device supports 45W fast wired charging but you do not get a charging adapter in the box.

VERDICT

With a starting price of ₹84,999, the Samsung Galaxy S22+ is what we'd call the Goldilocks phone

– just right for most consumers trying to decide between the S22 lineup. There is nothing path breaking that the phone offers, but it does make minor, yet tangible improvements over last year's model in almost every area. We wouldn't hesitate to recommend this phone to any Android lover. And, 4 years of Android OS updates is another jewel in this phone's crown.

–Dhriti Datta
